1.0 GENERAL INFORMATION AND BACKGROUND

1.1 Project Objective

Partners has developed this Remedial Action Plan (RAP) and Analysis of Brownfields Cleanup Alternatives (ABCA) for the Euclid-Woodlawn Redevelopment Site located at 12500-12524 Euclid Avenue and 1810 Woodlawn Avenue in East Cleveland, Cuyahoga County, Ohio. (Property). This RAP/ ABCA has been prepared for Cuyahoga County Land Reutilization Corporation (CCLRC/Client). It is Partners understanding that future redevelopment plans may include a muti-family, mixed use, or commercial use.

This RAP defines the remedial tasks that will be required in order to be compliant with Ohio Voluntary Action program (VAP) standards for residential land use, commercial/industrial land use and construction/excavation activities.

1.2 Project Property

The Property is listed on the Cuyahoga County Auditor's website as three individual tax parcels identified as Parcel Numbers 672-13-009, 672-13-010, and 672-13-011. The Property is currently comprised of approximately 0.75 acres of vacant land and gravel parking. The Property is currently owned by CCLRC. The Property location is shown on **Figure 1**.

This RAP addresses one soil remedial action area and one groundwater remedial action area. The soil remedial action area consists of an approximately 1,500-square foot area located on the southeastern portion of the Property. The groundwater remedial action area consists of an approximately 8,500-square foot area that encompasses the soil remediation area and extends north to the Property boundary.

1.3 Potential Adverse Impacts Caused by Extreme Weather

The Property is located in East Cleveland, Ohio which has a moderate climate. The primary concerns for adverse weather would be extreme heat or extreme snow/cold.

According to the Federal Emergency Management Agency (FEMA) Flood Zone Map 39035C0088E, the Property is located in a Minimal Flood Hazard Area as determined by FEMA (https://fema.gov).

The Property is located in an urbanized area of the City of East Cleveland, with little to no wildfire risk. There is an established fire department within close proximity of the Property.

Therefore, the potential for adverse impacts due to extreme weather are considered minimal.

No structures are currently present at the Property. The northeastern portion of the Property is currently developed with a gravel surfaced parking area. The remainder of the Property is grass or gravel covered.

Based on the geography of the Property and its proposed reuse (residential, mixed use or commercial), changing temperature, rising sea levels, wildfires, changing dates of ground thaw/freezing, changing ecological zone, saltwater intrusion and changing groundwater table are not likely to significantly affect the Property.

1.4 Previous Investigations

Partners has worked closely with CCLRC since 2019 to work towards the redevelopment of the Property. Partners has prepared the following reports for the Property and adjoining sites.

Copyright © 2024, Partners

- *Phase I Environmental Site Assessment, Mickeys Parcels Site, 12550-12558 Euclid Avenue, 1819-1823 and 1810 Woodlawn Avenue, East Cleveland, Ohio* dated May 23, 2019.
- *Limited Phase II Investigation, Mickey's Parcels Site, 12550 Euclid Avenue, East Cleveland, Cuyahoga County, Ohio, for University Circle, Inc.,* dated August 15, 2019.
- *Supplemental Phase II Investigation, Mickey's Parcels Site, 12550 Euclid Avenue, East Cleveland, Cuyahoga County, Ohio, for University Circle, Inc.,* dated November 27, 2019.
- *Phase I Environmental Site Assessment, Mickeys Parcels Site, 12520-12570 Euclid Avenue and 1810 Woodlawn Avenue, East Cleveland, Ohio* dated January 22, 2021.
- *Limited Phase II Investigation, Vacant Commercial Building, 12524 Euclid Avenue, East Cleveland, Ohio* dated January 28, 2022.
- *Phase I Environmental Site Assessment, Former Gasoline Filling Station, 12500 Euclid Avenue, East Cleveland, Ohio* dated October 13, 2021.
- *Limited Phase II Investigation, Former Gasoline Filling Station, 12500 Euclid Avenue, East Cleveland, Ohio* dated February 10, 2022.
- *Closure Assessment, 1810 Woodlawn Avenue, East Cleveland, Ohio* dated July 12, 2022.

Findings of the previous assessments have revealed concentrations of TCE exceeding applicable standards in soil (direct contact construction worker), groundwater (unrestricted potable use and vapor intrusion to indoor air) and soil gas/sub-slab vapor (trench worker and vapor migration to indoor air). In short, the previous assessments have identified chlorinated solvents, and TCE in particular, to be the primary COCs driving human health risk.

Future receptors at the Property may include residents, commercial workers, and construction/excavation workers.

Previous Soil Gas/Sub-slab Vapor Testing Discussion

Partners installed one (1) soil gas monitoring point (SV-02) at the Property in July 2019 and two (2) soil gas monitoring points (SV-03 and SV-04) at the Property in November 2019.

Three (3) sub-slab vapor monitoring points were installed inside the building formerly located on the northeastern portion of the Property (SSV-01, SSV-02, and SSV-03) in January 2022.

The sub-slab vapor and soil gas samples were analyzed for VOCs by USEPA Method 8260, Compendium TO-15.

Sub-Slab Vapor

With the exception TCE, all detected VOC concentrations were below the Ohio VAP Generic Indoor Air Standards due to Vapor Intrusion (Residential Use Category) with the applied attenuation factor of 0.03.

The concentration of TCE in SSV-01 (675 micrograms per cubic meter [µg/m^3]) and SSV-01 Duplicate (1,220 µg/m^3) exceeded the applicable standard of 70 µg/m^3. SSV-01 is located in the southern portion of the former building.

Soil Gas

With the exception of TCE, the detected VOC analytes were below their respective VAP comparison standards with the applied attenuation factor.

Copyright © 2024, Partners

At SV-02 and SV-03, TCE was present at concentrations of 4,270 µg/m^3 and 325 µg/m^3, which exceed the standards for TCE in a residential scenario with the applied attenuation factor (70 µg/m^3).

The sample locations are depicted in **Figure 2**. The VOC Exceedances in soil gas and sub-slab vapor are shown in **Figure 3**.

VAP-Compliant Phase II

Based on the previous work at the Property, Partners completed additional investigation activities, the results of which are summarized in the following report.

- *VAP Compliant Limited Phase II Investigation, Euclid-Woodlawn Redevelopment Site, 12500-12524 Euclid Avenue and 1810 Woodlawn Avenue, East Cleveland, Cuyahoga County, Ohio* dated August 20, 2024.

The VAP Compliant Phase II Investigation Activities were completed to better delineate potential TCE source areas and to determine the horizontal and vertical extent of the TCE above VAP standards (direct contact and leaching to groundwater) in soil and above vapor intrusion screening levels (VISL) in groundwater at the Property. The information gathered through these activities was used to evaluate the feasibility and cost to reduce soil contaminant levels through removal and disposal and/or in situ treatment of impacted soils as well as to optimize an in-situ groundwater remediation plan. A copy of the report is included as **Appendix A**.

During this most recent assessment, Partners advanced a total of 46 soil borings, installed three new groundwater monitoring wells, redeveloped two existing groundwater monitoring wells, and sampled all five wells. The boring/sample locations are depicted in **Figure 2**.

Select soil samples were submitted for laboratory analysis based on a combination of historical information, field observations (visual or odor), PID screening results, the most likely depth of a release, and/or the potential point of compliance. Based on the conditions under assessment, soil samples were analyzed for VOCs by the USEPA Method 8260 (68 samples).

In addition to the VOC analysis, TCLP samples were selected from the two highest TCE results for waste characterization purposes and analyzed for TCLP VOCs, TCLP SVOCs, and TCLP RCRA 8 Metals (two samples).

Groundwater samples were collected and submitted for laboratory analyses of VOCs by USEPA Method 8260 (five samples).

Results

Subsurface Conditions

The subsurface profile may be generalized as discontinuous areas of brown to gray lean clay fill with varying amounts of gravel, concrete rubble, and brick rubble from the ground surface to depths ranging from 0.5 feet below ground surface (bgs) to 12.0 feet bgs. The fill materials are underlain by brown silty sand and/or light brown to gray lean clay to up to 15.5 feet bgs. Native soils were observed to have hydrocarbon odors and staining at various locations. Native soils were underlain by weathered gray shale bedrock from approximately six feet to as deep as 16 feet bgs and competent shale to the terminal depth of the borings (16 feet bgs). The boring and well logs are included in the attached VAP Compliant Limited Phase II Report (**Appendix A**).

Copyright © 2024, Partners

Soil Analytical Results

Results of current analytical testing indicate that all VOC analytical results were below the respective Ohio VAP GDCS standards and Leach-Based Soil Values cited for comparison, except for TCE in nine soil samples, benzene in two soil samples and cis-1,2- DCE in one soil sample.

Results of analytical testing indicate that all TCLP VOC, SVOC and metals analytical results were below the Maximum Concentration Table for Toxicity Characteristics Levels cited for comparison except for TCE in one sample (F-3A 8-10' [4.6 mg/l]) was detected above the TCLP Maximum Concentration Level of 0.5 mg/l.

The VOC Exceedances in soil are shown in **Figure 4**.

Groundwater Analytical Results

Results of analytical testing indicate that all detected VOC concentrations in groundwater were well below the applicable Ohio VAP UPUS and USEPA VISL cited for comparison except for 1,1-dichloroethene detected above the Ohio EPA UPUS in two samples, cis-1,2-DCE detected above UPUS in two samples, vinyl chloride detected above UPUS in two samples and TCE detected above the US EPA Vapor Intrusion Screening Levels (VISL) for Commercial Use, US EPA VISL for Residential Use, and/or Ohio EPA UPUS in six samples.

The Distribution of VOCs in Groundwater are shown in **Figure 5**.

Recommendations

Partners recommended a Remedial Action Plan be developed to address soils and groundwater impacted by TCE to reduce contaminant levels in the source area and ensure residential groundwater VISL standards are not, and will not be, exceeded at the Property boundary.

The area of potential redevelopment was described as the eastern portion of the Property, including the current gravel parking lot and the grass-covered area south of the parking lot. The remedial action area for soil consists of an approximately 1,500-square foot portion of the redevelopment area. The groundwater remedial action area consists of an approximately 8,500-square foot area that encompasses the soil remediation area and extends north to the Property boundary. The location and extents of the remedial action areas are shown in **Figure 6**.

1.5 Planned Redevelopment

The planned reuse for the Property may include a multi-family, mixed use, or commercial use.

2.0 APPLICABLE REGULATIONS AND CLEANUP STANDARDS

The Ohio EPA VAP standards were used for evaluation of Property conditions.

Evaluation of Soil

The Ohio VAP Generic Numerical Direct Contact Soil Standards (GDCS) for the Residential Land Use Category, Commercial/Industrial Land Use Category, and Construction/Excavation Activities Category (Ohio Administrative Code [OAC] 3745-300-08) were used for evaluation of the results of soil analyses.

Soil Samples were also compared to the Ohio EPA VAP Derived Leach-Based Soil values for Soil Type II.

Copyright © 2024, Partners

TCLP samples were compared to the Maximum Concentration of Contaminants for the Toxicity Characteristic Table in the CFR Title 40 261.24.

Evaluation of Groundwater

Results of groundwater analyses were compared to the Ohio VAP Generic and Risk-Based Unrestricted Potable Use Standards (UPUS, OAC Rule 3745-300-08, Appendix Table VIII and IX). The UPUS standards were developed based on the assumption that groundwater will be used as a source for drinking, cooking, and bathing.

Results of groundwater sampling were also compared to the USEPA Vapor Intrusion Screening Levels (VISL) Target Groundwater Concentrations for Residential Land Use and Commercial Land Use and with a carcinogenic risk of $1E^{-5}$, hazard quotient of 1, an attenuation factor (AF) of 0.001, and a groundwater temperature of 11 degrees Celsius in accordance with the Ohio EPA document *Sample Collection and Evaluation of Vapor Intrusion to Indoor Air for Remedial Response, RCRA and VAP.*

Evaluation of Sub-Slab Vapor and Soil Gas

Results of sub-slab vapor and soil gas analyses were compared to the Ohio VAP Generic Indoor Air Standards due to Vapor Intrusion, Commercial/Industrial Land Use category (OAC rule 3745-300-08, Appendix Table V). To evaluate sub-slab vapor/soil gas results, an attenuation factor is applied to the indoor air standard to account for the reduction in concentration during vapor migration in the subsurface coupled with the dilution that occurs when the vapors enter a building and mix with indoor air. In accordance with Ohio EPA guidance and USEPA Guidance (June 2015), an attenuation factor of 0.03 was applied to the Indoor Air Standards.

Where applicable, the comparison standard was obtained from the Ohio EPA document titled *Response Action Levels for COCs at Vapor Intrusion Sites in Ohio* (Ohio EPA, 2016).

3.0 EVALUATION OF CLEANUP ALTERNATIVES

3.1 Cleanup Alternatives Considered

To address contamination at the Property, three different alternatives were considered, including:

Alternative #1: No Action.

Alternative #2: Complete removal of impacted soil and in-situ treatment of groundwater, with VAP No Further Action (NFA) submitted along with a request for a Covenant Not To Sue (CNS) from the Ohio EPA once applicable VAP standards are demonstrated to have been achieved.

Alternative #3: In-situ treatment of groundwater, in-situ treatment of soil in the six to 12-foot interval, and consideration for the installation of a sub-slab depressurization system during construction of the future building, with VAP NFA submitted along with a request for a CNS from the Ohio EPA once applicable VAP standards are achieved.

3.2 Effectiveness, Implementability and Cost of Cleanup Alternatives

To satisfy EPA requirements, the effectiveness, implementability, and cost of each alternative was considered prior to selecting a recommended cleanup alternative.

Copyright © 2024, Partners

Effectiveness

Alternative #1: No Action is not effective in controlling or preventing the exposure of receptors to contamination at the Property. New construction would be complicated by potential worker exposure to contaminants in soil and the vapor migration to trenches and indoor air. Further, the potential for future off-site migration of contaminants would remain as the source area of contaminants in soil would remain. Climate change conditions such as extreme heat or extreme snow/cold would require additional energy to cool buildings during hot months and heat buildings during cold months.

Alternative #2: Complete removal of approximately 485 tons of impacted soil in the remedial area from the six foot below ground surface (bgs) to 12 foot bgs interval followed by the placement of approximately 485 tons of engineered fill to replace the excavated soil is an effective method to address conditions at the Property. In-situ treatment of groundwater, as described in **Section 4.1**, is an effective way to eliminate risk at the Property. Contamination in the saturated zone and soil in the six to 12-foot interval will be removed and disposed of properly, and the trench worker vapor exposure will no longer be a concern. Vapor mitigation for any new building may still be required even after soil removal and groundwater treatment under Ohio's VAP or a presumptive vapor mitigation may be implemented.

Alternative #3: In-situ treatment of groundwater and treatment of soil in the six to 12-foot interval, as described in **Section 4.1,** is an effective way to eliminate risk at the Property. Contamination in the saturated zone will be removed, impacted soil will be treated, and vapor exposure concern for the construction worker will no longer exist. Vapor mitigation for any new building will need to be evaluated post-remedy under the VAP prior to new construction or a presumptive mitigation (e.g., vapor extraction system to eliminate the risk of TCE vapors entering the building) may be implemented.

Implementability

Alternative #1: No Action is easy to implement since no actions will be conducted.

Alternative #2: This alternative would pose difficulties due to the urban setting. This alternative would require the removal of impacted soil from six to 12 feet over an area of about 1,500 square feet in this mixed residential/commercial area of East Cleveland. The mass excavation (485 tons) would increase the risk of acute exposure of TCE vapors to sensitive populations in the neighborhood. The increased truck traffic for transporting soil off-site and importing clean soil would expose residents to increased emissions and stress the City's streets.

One consideration that may make excavation slightly more difficult to implement is the increased frequency of heavy rainfall events that has been experienced in recent years in East Cleveland, Ohio. Although efforts will be made to schedule the work in the dry weather months, the amount of precipitation over a short period of time from one of these heavy rainfall events could raise the groundwater level and increase dewatering needs.

Alternative #3: In-situ treatment of groundwater and soil is relatively safe and easy to implement. Dust suppression and air monitoring will be necessary to protect the community during cleanup activities. This alternative will require less truck traffic than Alternative #2. Vapor mitigation for any new building may still be required even after soil removal and groundwater treatment under Ohio's VAP.

Cost

Alternative #1: There would be no costs for the No Action alternative.

Alternative #2: Complete removal of impacted soil and in-situ groundwater treatment would cost on the order of **$416,603**, including VAP related activities to attain an NFA and CNS. Refer to the Alternative #2 table below for a breakdown of the costs.

Copyright © 2024, Partners

Alternative #3: In-situ treatment of soil and groundwater would cost on the order of **$358,910**, including VAP related activities to attain an NFA and CNS. Refer to the Alternative #3 table below for a breakdown of the costs.

The following are budgetary probable costs, based on Partners experience and the specific scope of tasks anticipated at this time to implement the planned remedies and VAP activities.

ALTERNATIVE #1 TASKS	COST
No Action	$0
TOTAL COSTS	**$0**

ALTERNATIVE #2 TASKS	COST
Prepare Soil Specifications and Assist in Selection of Contractor	$4,500
Targeted Soil Removal, Transport, Disposal & Import Clean Fill	$207,593 (1)
Oversight, Project Coordination & Waste Characterization	$10,750
Prepare Groundwater Specifications and Assist in Selection of Contractor	$5,000
In-Situ Groundwater Treatment	$101,560 (2)
Oversight and Project Coordination	$6,200
Groundwater Monitoring (6 Events)	$24,000 (3)
Remedial Action Completion Report	$8,500
Additional VAP Activities	$48,500 (4)
TOTAL COSTS	**$416,603**

ALTERNATIVE #3 TASKS	COST
Prepare Specifications and Assist in Selection of Remediation Contractor	$4,500
Targeted Soil Excavation and In Situ Treatment	$149,450 (5)
Oversight of In-Situ Soil Treatment Activities	$11,200 (6)
Prepare Groundwater Specifications and Assist in Selection of Contractor	$5,000
In-Situ Groundwater Treatment	$101,560 (2)

Copyright © 2024, Partners

ALTERNATIVE #3 TASKS	COST
Oversight and Project Coordination	$6,200
Groundwater Monitoring (6 Events)	$24,000 (3)
Remedial Action Completion Report	$8,500
Additional VAP Activities	$48,500 (4)
TOTAL COSTS	**$358,910**

(1) Costs for excavating, transport, disposal of 485 tons and import of clean fill at approximately $372 per ton. The cost also includes 15% added as an adjustment for inflation assuming work will be completed within two years of award.
(2) Costs for in-situ groundwater treatment include three days of labor at $33,700 and treatment materials cost of $ $54,613. The cost also includes 15% added as an adjustment for inflation assuming work will be completed within two years of award.
(3) The cost includes four quarterly and two semi-annual groundwater monitoring events at $4,000 per event.
(4) VAP Activities include VAP PI Report, VAP PII Report, RMP, TA/Agency Communications, and NFA Letter.
(5) Costs of targeted soil excavation and in-situ treatment of 485 tons of soil at approximately $268 per ton. The cost also includes 15% added as an adjustment for inflation assuming work will be completed within two years of award.
(6) The cost for project oversight is based on a total of 5 work shifts at $2,240 per shift.

3.3 Alternatives Not Selected

Based on project size, time, cost, intended future Property use and planned construction/end use requirements:

Alternative #1 – No Action was deemed infeasible because soil and groundwater contamination would remain at the Property and because of the possibility of impacted groundwater migrating off-site.

Alternative #2 - Complete Removal of Impacted Soil and In-Situ Groundwater Treatment was deemed inappropriate due to the high cost of removal, transportation and disposal of impacted soil. In-situ treatment of groundwater is an effective way to eliminate risk at the Property. However, the mass excavation would increase the risk of acute exposure of TCE vapors to sensitive population in the neighborhood. In addition, the increased truck traffic for transporting soil off-site and importing clean soil would expose residents to increased emissions and stress the City's streets.

4.0 CHOSEN ALTERNATIVE

The RAP has been completed in accordance with Ohio VAP protocols and methods. The RAP is designed to address areas of the Property impacted by VOCs (TCE in soil, groundwater and soil gas) in the eastern portion of the Property.

Based on the evaluation criteria Alternative #3 – In-situ Treatment of Soil and Groundwater was deemed appropriate because it would be the most cost effective and most easily implementable of the listed alternatives to facilitate the planned use of the Property. In-situ treatment of groundwater and soil is an effective way to eliminate risk at the Property. Contamination in the saturated zone will be removed, impacted soil will be treated, and vapor exposure concern for the construction worker will no longer exist.

Copyright © 2024, Partners

In-situ treatment of groundwater and soil is relatively safe and easy to implement. Additional detail regarding the implementation of Alternative #3 follows.

4.1 Remedial Action

The soil remedial action includes the following tasks:

Remove the upper six feet of soil in the soil remediation area (**Figure 6**) and temporarily stockpile it nearby on-Property. The underlying TCE impacted six to 12' bgs interval of soil will be treated in-place with chemical and/or biological additives (to be determined by the remediation contractor) to reduce the TCE and its daughter product concentrations to acceptable levels and the treated soil will remain in place. The acceptable Target Level for TCE in soil is a linear adjustment of the Leach-Based Soil Value, which is calculated by applying the ratio between the groundwater Residential VISL and VAP UPUS values to the Leach-Based Soil Value. The resulting Target Level for TCE in soil is 0.045 mg/kg.

Existing TCE concentrations are summarized in the attached VAP Compliant Limited Phase II Investigation (**Appendix A**).

Once soil remediation is complete, the soil will be stabilized with Calciment or similar additive so that the treated soil can support compacted backfill and the previously removed and stockpiled upper six feet of soil would then be backfilled into the soil remediation area. The backfilled soil remediation area will then be compacted to support construction traffic.

The groundwater remedial action will include in situ treatment of groundwater and includes the following tasks.

The in situ injection program will target TCE and its daughter products, such as cis-1,2-DCE and vinyl chloride. An appropriate number of injection points (number and spacing to be determined by the remediation contractor) will be needed to treat the approximately 8,500-square foot groundwater remediation area (**Figure 6**). The injections will be made at appropriate depths bgs to target the impacted groundwater and saturated soils, up to 20 feet bgs.

The injection program will utilize direct-push technology to apply the proposed injectant(s). The overall program will be designed to reduce source area concentrations and limit plume migration, as well as promote conditions in the saturated zone favorable to biologically or chemically degrade (injectant to be determined by remediation contractor) chlorinated VOCs. The resulting emplacement will treat dissolved phase chloroethenes.

Subsequent rounds of groundwater monitoring of the five existing wells to confirm the effectiveness of the treatment. Partners will complete four quarterly groundwater monitoring events, followed by semi-annual groundwater monitoring until target levels are achieved and the injectant is no longer active.

4.1.1 Remedial Completion Reporting

Upon completion of the remedial activities described above, including groundwater monitoring, a completion report will be prepared by Partners. The remediation contractors will provide Partners documentation to include actual quantities of soil disposed/imported, compaction records, actual injection locations, depth intervals and volumes injected. The completion report will include the contractor-provided information and provide data with supporting documentation demonstrating the effectiveness of the remedial actions.

Copyright © 2024, Partners

5.0 GREEN AND SUSTAINABLE REMEDIATION MEASURES FOR SELECTED ALTERNATIVE

To make the selected alternative greener, or more sustainable, several techniques are planned. The most recent Best Management Practices (BMPs) issued under ASTM Standard E-2893: Standard Guide for Greener Cleanups will be used as a reference in this effort. A request will be made to the cleanup contractor to follow an idle-reduction policy and use heavy equipment with advanced emissions controls operated on ultra-low sulfur diesel. The excavation work could be conducted during the dry-weather months (summertime) in order to minimize groundwater infiltration into the excavation area, in turn reducing dewatering needs and the amount of dewatering liquids requiring disposal/treatment. The number of mobilizations to the Property would be minimized and erosion control measures would be used to minimize runoff into environmentally sensitive areas.

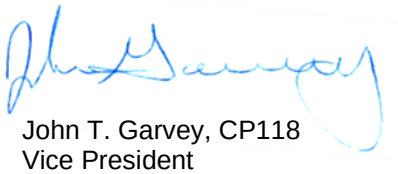

6.0 CLOSING

Thank you for the opportunity to serve your needs. Please call us at (800) 763-1363 if you have any questions or if we can be of any further assistance.

Sincerely,
Partners

1.0 INTRODUCTION

Partners was contracted by the Ohio Environmental Protection Agency (EPA/Client) to conduct an Ohio EPA Voluntary Action Program (VAP) compliant Limited Phase II Investigation (Phase II) at the Euclid-Woodlawn Redevelopment Site located at 12500-12524 Euclid Avenue and 1810 Woodlawn Avenue in East Cleveland, Cuyahoga County, Ohio. The location of the Property is depicted on **Figure 1**. To be clear, the procedures for this assessment are VAP compliant. This assessment does encompass all aspects of a VAP Phase II Property Assessment.

The Property is listed on the Cuyahoga County Auditor's website as three (3) individual tax parcels identified as Parcel Numbers (PNs) 672-13-009, 672-13-010, and 672-13-011. The Property is currently comprised of approximately 0.75 acres of vacant land and gravel parking. The Property is currently owned by the Cuyahoga County Land Reutilization Corporation (CCLRC).

Historically the Property has been utilized as a gasoline filling station, auto sales and service, commercial printing and a dry-cleaning facility.

2.0 PREVIOUS INVESTIGATIONS

Partners has extensive experience with this Property and has worked closely with CCLRC to work towards the redevelopment of the Property. Partners has prepared the following reports for the Property and adjoining sites.

- *Phase I Environmental Site Assessment, Mickeys Parcels Site, 12550-12558 Euclid Avenue, 1819-1823 and 1810 Woodlawn Avenue, East Cleveland, Ohio* dated May 23, 2019.
- *Limited Phase II Investigation, Mickey's Parcels Site, 12550 Euclid Avenue, East Cleveland, Cuyahoga County, Ohio, for University Circle, Inc.,* dated August 15, 2019.
- *Supplemental Phase II Investigation, Mickey's Parcels Site, 12550 Euclid Avenue, East Cleveland, Cuyahoga County, Ohio, for University Circle, Inc.,* dated November 27, 2019.
- *Phase I Environmental Site Assessment, Mickeys Parcels Site, 12520-12570 Euclid Avenue and 1810 Woodlawn Avenue, East Cleveland, Ohio* dated January 22, 2021.
- *Limited Phase II Investigation, Vacant Commercial Building, 12524 Euclid Avenue, East Cleveland, Ohio* dated January 28, 2022.
- *Phase I Environmental Site Assessment, Former Gasoline Filling Station, 12500 Euclid Avenue, East Cleveland, Ohio* dated October 13, 2021.
- *Limited Phase II Investigation, Former Gasoline Filling Station, 12500 Euclid Avenue, East Cleveland, Ohio* dated February 10, 2022.
- *Closure Assessment, 1810 Woodlawn Avenue, East Cleveland, Ohio* dated July 12, 2022.

Findings of the previous assessments have revealed concentrations of trichloroethene (TCE) exceeding applicable standards in soil, groundwater and soil gas/sub-slab vapor. Analytical testing of soil, groundwater, sub-slab vapor, and soil gas from these previous reports is summarized in **Tables 3A** through **3C.** In short, the previous assessments have identified chlorinated solvents, and TCE in particular, to be the primary COCs driving human health risk. Copies of these reports can be found in **Appendix D**.

3.0 LIMITED PHASE II INVESTIGATION ACTIVITIES

The Limited Phase II Investigation Activities were completed to investigate and delineate potential source areas to determine the horizontal and vertical extent of the trichloroethene (TCE) exceedances of certain VAP standards in soil and groundwater at the Property. The information gathered through these activities will be used to evaluate the feasibility and cost to eliminate soil contamination through removal and disposal and/or in-situ treatment of impacted soils as well as to optimize a groundwater remediation plan.

Copyright © 2024, Partners

3.1 Scope of Work

The Limited Phase II activities included soil boring installation and sampling and groundwater monitoring well installation and sampling. Partners advanced a total of 46 soil borings, installed three (3) new groundwater monitoring wells, redeveloped two (2) existing groundwater monitoring wells, and sampled all five (5) wells.

3.2 Methods of Assessment

3.2.1 Soil Boring, Sampling, Field Screening and Analysis

A total of 46 soil borings were installed at the Property as described below.

On May 13, 2024, through May 15, 2024, a total of 30 soil borings were advanced in a grid pattern on the Property. The soil borings were positioned in rows designated A through F with five (5) borings per each letter designation. Four (4) additional borings were placed in areas of previously identified TCE contamination.

On June 5, 2024, Partners installed an additional three (3) soil borings which were converted into groundwater monitoring wells (MW-200 through MW-202).

Once the initial soil results were reviewed, it was determined that additional delineation of soil was necessary to determine the extents of TCE exceedances. On July 1, 2024, an additional nine (9) soil borings were installed in a grid pattern on the southern portion of the Property. The soil borings were positioned in rows designated G through J with between one (1) and three (3) borings per each letter designation.

The borings were advanced continuously from the ground surface to a depth of approximately 12 feet below ground surface (bgs) with a track-mounted, direct push (Geoprobe™) sampling system. The Geoprobe™ drives a two (2)-inch outside diameter (OD), stainless steel tube containing a new disposable acetate liner into the subsurface to obtain soil samples. The soil is forced into the liners at continuous four (4)-foot vertical intervals and is then retrieved to the surface. Each four (4)-foot soil sample was further divided into two (2)-foot sample intervals, visually observed, sampled, logged, and classified according to the Unified Soil Classification System (USCS) by a member of Partners' field staff. The soil boring locations are depicted on **Figure 2**.

Soil samples were divided into two (2) portions. One (1) portion was placed in new pre-cleaned Terracore™ sampling system containers or two (2) ounce laboratory supplied glass jars for preservation prior to selection of samples for laboratory analysis. The second portion was placed into new re-sealable plastic bags for screening purposes. Samples selected for laboratory analysis were labeled and placed in a cooler containing ice, pending submission to a National Environmental Laboratories Accreditation Conference (NELAC) certified laboratory for chemical analysis. Two (2) sample intervals were submitted to the laboratory from each boring. New disposable nitrile gloves were worn and changed between each sample to prevent cross-contamination. The sampling equipment was decontaminated between events with an Alconox® detergent wash and deionized water rinse.

Soil samples were field screened for the presence of organic vapors using a MiniRAE 3000 Photoionization Detector (PID) manufactured by Honeywell RAE Systems. The PID was calibrated prior to field activities using a known concentration of a gas standard in accordance with the manufacturers' specifications. Soil sample PID readings are included on the soil boring logs in **Appendix A**. Sampling forms are presented in **Appendix B.**

Select soil samples were submitted for laboratory analysis based on a combination of historical information, field observations (visual or odor), PID screening results, the most likely depth of a release, and/or the potential point of compliance. Based on the conditions under assessment, selected soil samples were analyzed for some or all of the following parameters:

- Volatile organic compounds (VOCs) by the USEPA Method 8260 with Terracore field preservation (68 samples).

Copyright © 2024, Partners

In addition to the VOC analysis TCLP samples were selected from each boring for waste characterization purposes and sent to the laboratory on 'hold' prior to receiving VOC analysis results and analyzed for the following parameters:

- TCLP (VOCs), semi-volatile organic compounds (SVOCs), and RCRA 8 Metals (two [2] samples).

Soil samples were labeled, placed in a cooler with ice, and submitted for analysis under appropriate chain-of-custody control to ALS Environmental located in Cincinnati, Ohio. The laboratory analytical report is included in **Appendix C**.

3.2.2 Groundwater Monitoring Well Installation, Sampling, and Analysis

Following the receipt of soil analysis on June 5th, 2024, three (3) additional soil borings were installed as described above and were completed as groundwater monitoring wells (MW-200, MW-201 and MW-202). The monitoring wells were constructed with two (2)-inch diameter polyvinyl chloride (PVC) riser and 0.010'' slotted screen (10-feet in length) positioned to span the groundwater interface. The monitoring well riser and screen were connected using threaded joints. The annular space was filled with sand to approximately two (2)-feet above the screened interval. Hydrated bentonite chips filled the remaining annular space to the surface. The wells were completed at the surface with steel flush-mount protective covers set in a concrete pad. The monitoring wells were installed through 4.25-inch inner diameter hollow stem augers (HSA). The monitoring well logs are included in **Appendix A**. The monitoring well locations are depicted on **Figure 2**.

The three (3) new monitoring wells are designated as MW-200, MW-201, and MW-202. The two (2) existing monitoring wells on the Property are designated as MW-04 and MW-05. On June 11, 2024, the five (5) wells on the Property were developed by pumping and surging approximately three (3) well volumes from each well, or until the development groundwater was visibly clear. A whaler pump was used to develop the monitoring wells. Static water level was measured to the nearest 0.01-ft using a hydrocarbon/water interface probe. Groundwater flow direction is depicted on **Figure 3**.

On June 13, 2024, the five (5) groundwater monitoring wells were sampled using a QED SamplePro portable micropurge bladder pump, QED Micropurge Basics controller with a compressed gas cylinder, and disposable polyethylene bladders/tubing. Groundwater samples were obtained by using standard low flow sampling techniques. Based on aquifer characteristics and monitoring well diameter, flow rates of approximately 200 milliliters (ml) per minute were utilized. A Horiba U-52 Water Quality Monitoring System with a flow-through cell was used by Partners to monitor groundwater quality data (including pH, conductivity, turbidity, dissolved oxygen, oxidation reduction potential, and temperature). Sampling forms are presented in **Appendix B.**

Groundwater samples were collected, placed in a cooler with ice and submitted for laboratory analyses under appropriate chain-of-custody control to ALS Environmental located in Cincinnati, Ohio. The laboratory analytical report is included in **Appendix C**.

Groundwater samples were collected and submitted for laboratory analyses of VOCs by USEPA Method 8260.

3.2.3 Investigation Derived Waste

Soil media generated from soil boring field activities, excess soil cuttings, and field screened soil was containerized in four (4) Department of Transportation (DOT)-approved 55-gallon drums. Purge and decontamination water generated during groundwater development and sampling activities was containerized in one (1) Department of Transportation (DOT)-approved 55-gallon drum. The drums were properly labeled and temporarily staged on the Property. Based on data collected during this investigation, the containerized soil is characterized as hazardous. It is in the process of being removed for off-Property disposal at a facility licensed to accept hazardous waste.

Copyright © 2024, Partners

4.0 POTENTIALLY APPLICABLE COMPARISON STANDARDS

Although the Property is not going through the Ohio EPA VAP, the program has promulgated standards under state environmental law that establish levels that are considered protective of human health and the environment. These standards were used for evaluation of Property conditions. Partners understands that the potential land use of the Property has not been determined.

Evaluation of Soil

The Ohio VAP Generic Numerical Direct Contact Soil Standards (GDCS) for the Residential Land Use Category, Commercial/Industrial Land Use Category, and Construction/Excavation Activities Category (Ohio Administrative Code [OAC] 3745-300-08) were used for evaluation of the results of soil analyses.

Soil Samples were also compared to the Ohio EPA VAP Derived Leach-Based Soil values for Soil Type II.

Toxicity Characteristic Leaching Procedure (TCLP) samples were compared to the Maximum Concentration of Contaminants for the Toxicity Characteristic Table in the CFR Title 40 261.24.

Evaluation of Groundwater

Results of groundwater analyses were compared to the Ohio VAP Generic and Risk-Based Unrestricted Potable Use Standards (UPUS, OAC Rule 3745-300-08, Appendix Table VIII and IX). The UPUS standards were developed based on the assumption that groundwater will be used as a source for drinking, cooking, and bathing.

Results of groundwater sampling were also compared to the USEPA Vapor Intrusion Screening Levels (VISL) Target Groundwater Concentrations for Residential Land Use and Commercial Land Use and with a carcinogenic risk of $1E^{-5}$, hazard quotient of 1, an attenuation factor (AF) of 0.001, and a groundwater temperature of 11 degrees Celsius in accordance with the Ohio EPA document *Sample Collection and Evaluation of Vapor Intrusion to Indoor Air for Remedial Response, RCRA and VAP.*

5.0 FINDINGS

The results of the current analytical testing are presented in **Tables 1 and 2**.

5.1 Subsurface Conditions

The subsurface profile may be generalized as brown to gray lean clay fill with varying amounts of gravel, concrete rubble, and brick rubble from the ground surface to depths ranging from 0.5 feet bgs to 12.0 feet bgs. The fill materials are underlain by brown silty sand and light brown to gray lean clay to 14.0 feet bgs. Native soils were observed to have hydrocarbon odors and staining at various locations. Native soils were underlain by weathered gray shale bedrock in the southern portion of the Property from approximately nine (9.0) feet to the terminal depth of the borings.

5.2 Soil Analytical Results

VOCs: Results of current analytical testing indicate that 23 VOC analytes were detected in the soil samples at concentrations above laboratory reporting limits (RLs). All VOC analytical results were below the respective Ohio VAP GDCS standards and Leach-Based Soil Values cited for comparison except for the following:

Trichloroethene (TCE) was detected above the Ohio EPA Generic Leach-Based Soil Values for Soil Type II (0.023 mg/kg) in the following samples:

- F-1 (2-4) soil sample had TCE at a concentration of 0.043 mg/kg.
- F-3 (6-8') soil sample had TCE at a concentration of 0.092 mg/kg.
- F-3 (8-10') soil sample had TCE at a concentration of 7.8 mg/kg.
- PMW-200 (8-10') soil sample had TCE at a concentration of 4.0 mg/kg.
- G -2.5 (4-6') soil sample had TCE at a concentration of 0.027 mg/kg.
- G -2.5 (4-6') Duplicate sample had TCE at a concentration of 0.033 mg/kg.

Copyright © 2024, Partners

- G-3.5 (6-8') soil sample had TCE at a concentration of 0.081 mg/kg.
- G-1.5 (4-6') soil sample had TCE at a concentration of 0.055 mg/kg.
- G-1.5 (10-12') soil sample had TCE at a concentration of 0.16 mg/kg.
- SB-02 (2-4') soil sample had TCE at a concentration of 111 mg/kg.
- SB-03 (6-8') soil sample had TCE at a concentration of 0.672 mg/kg.
- MW-01 (10-12') soil sample had TCE at a concentration of 0.167 mg/kg.
- SB-09 (10-12') soil sample had TCE at a concentration of 0.699 mg/kg.
- SB-10 (14-16') soil sample had TCE at a concentration of 6.04 mg/kg.
- SB-11 (0-2') soil sample had TCE at a concentration of 0.229 mg/kg.
- SB-11 (14-16') soil sample had TCE at a concentration of 0.12 mg/kg.
- SB-12 (0-2') soil sample had TCE at a concentration of 0.0316 mg/kg.
- SB-12 (10-12') soil sample had TCE at a concentration of 0.224 mg/kg.
- SB-14 (10-12') soil sample had TCE at a concentration of 3.63 mg/kg.
- PMW-100 (8-10') soil sample had TCE at a concentration of 0.523 mg/kg.
- SB-01 (8-10') soil sample had TCE at a concentration of 0.133 mg/kg.
- MW-01 (8-10') soil sample had TCE at a concentration of 0.347 mg/kg.

Benzene was detected slightly above the Ohio EPA Generic Leach-Based Soil Values for Soil Type II (0.009 mg/kg) in the following samples:

- F-2 (6-8') Duplicate soil sample had benzene at a concentration of 0.014 mg/kg.
- F-5 (6-8') soil sample had benzene at a concentration of 0.0098 mg/kg.
- SB-13 (6-8') soil sample had benzene at a concentration of 0.159 mg/kg.

Cis-1,2-dichloroethene was detected slightly above the Ohio EPA Generic Leach-Based Soil Values for Soil Type II (0.07 mg/kg) in the following sample:

- G-1.5 (10-12') Duplicate soil sample had cis-1,2-dichloroethene at a concentration of 0.090 mg/kg.

The results of the soil testing are summarized in **Table 1**. A Distribution of VOCs in soil is presented on **Figure 4**. VOCs in Soil Exceeding Leach-Based Values is presented as **Figure 4A**.

TCLP VOCs: Results of analytical testing indicate that two (2) VOC analytes were detected in the TCLP soil samples at concentrations above laboratory RLs. All TCLP VOC analytical results were below the Maximum Concentration Table for Toxicity Characteristics cited for comparison except for the following:

Trichloroethene (TCE) was detected above the TCLP Maximum Concentration Table (0.5 mg/l) in the following sample:

- F-3A (8-10') soil sample had a TCE at concentration of 4.6 mg/l.

Soil in the area of soil boring F-3A at a depth of 8-10 feet below ground surface, if removed, will be considered hazardous waste.

TCLP SVOCs: Results of analytical testing indicate that no SVOC analytes were detected in the TCLP soil samples at concentrations above laboratory RLs. All laboratory RLs are below cited comparison standards.

TCLP Metals: Results of analytical testing indicate that no metals were detected in the TCLP soil samples at concentrations above laboratory RLs, except barium. The barium concentrations were well below cited comparison standards.

Copyright © 2024, Partners

The results of the TCLP soil testing are summarized in **Table 4**.

5.3 Groundwater Analytical Results

VOCs: Results of analytical testing indicate that five (5) VOC analytes were detected in groundwater at concentrations above laboratory reporting limits (RLs). All detected VOC concentrations were well below the applicable Ohio VAP UPUS and USEPA VISL cited for comparison with the following exceptions:

1,1-Dichloroethene was detected above the Ohio EPA UPUS (7 ug/l) in the following samples:

- MW-200 groundwater sample had a 1,1-dichloroethene concentration of 7.3 ug/l.
- MW-200 Duplicate groundwater sample had a 1,1-dichloroethene concentration of 7.4 ug/l.

Cis-1,2-Dichloroethene was detected above UPUS (70 ug/l) in the following samples:

- MW-200 groundwater sample had a cis-1,2-dichloroethene concentration of 86 ug/l.
- MW-200 Duplicate groundwater sample had a cis-1,2-dichloroethene concentration of 85 ug/l.

Trichloroethene was detected above the US EPA Vapor Intrusion Screening Levels (VISL) for Commercial Use (41.6 ug/l), US EPA VISL for Residential Use (9.9 ug/l), and/or Ohio EPA UPUS (5 ug/l) in the following samples:

- MW-200 groundwater sample had a trichloroethene concentration of 980 ug/l, which exceeds UPUS, Residential VISL, and Commercial VISL values.
- MW-200 Duplicate groundwater sample had a trichloroethene concentration of 970 ug/l, which exceeds UPUS, Residential VISL, and Commercial VISL values.
- MW-201 groundwater sample had a trichloroethene concentration of 17 ug/l, which exceeds the UPUS and Residential VISL values.
- MW-202 groundwater sample had a trichloroethene concentration of 7.6 ug/l, which exceeds the UPUS value.

Vinyl chloride was detected above the Ohio EPA UPUS (2 ug/l) in the following sample:

- MW-200 groundwater sample had a vinyl chloride concentration of 4.9 ug/l, which exceeds the UPUS value.
- MW-200 Duplicate groundwater sample had a vinyl chloride concentration of 5.0 ug/l, which exceeds the UPUS value.

The results of groundwater testing are summarized in **Table 2**. Distribution of VOCs in groundwater is presented in **Figure 5**.

6.0 LIMITATIONS

The analytical results and conclusions presented in this report are based on the completion of a limited number of soil borings, monitoring wells, and previously installed soil gas vapor points, and limited analytical testing. Although the results presented above provide a reasonable indication of conditions in the areas evaluated, they may not be indicative of conditions in areas of the Property not evaluated by Partners.

7.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the Limited Phase II, Partners presents the following summary and conclusions regarding the Property.

Soil Testing

Based on the results of analytical testing, soil has been impacted by trichloroethene and benzene at concentrations exceeding the Ohio VAP Leach Based soil values.

A Remedial Action Plan (RAP) should be developed to address soils impacted by chlorinated solvents.

Copyright © 2024, Partners

Groundwater Testing

VOC analytical results for trichloroethene, 1,1-dichloroethene, and vinyl chloride exceeded cited comparison standards.

Partners recommends a remedial action plan be developed to address groundwater impacted by chlorinated solvents to ensure residential VISL standards are not, and will not be, exceeded at the Property boundary. Any new construction should evaluate the need for the installation of a vapor mitigation system after remedial measures are implemented.

8.0 CLOSING

Thank you for the opportunity to serve your needs. Please call us at (800) 763-1363 if you have any questions or if we can be of any further assistance.

Sincerely,
Partners

Jeremy Kendle
Project Manager

Chris Butcher

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Residential Land Use.
4. Ohio VAP GDCS Commercial/Industrial Land Use.
5. Ohio VAP GDCS Construction/Excavation Activities.
6. Supplemental criteria from the Ohio VAP CIDARS.
7. Ohio EPA VAP Derived Leach-Based Soil Values for Soil Type II, TGM October 2008

Bold numbers indicate a concentration above laboratory reporting limits.

Bold and shaded numbers indicate a detected concentration above a comparison standard.

NE - No existing standard per the referenced agency

Laboratory Qualifiers:

ND: Not Detected at the Reporting Limit

All results were coded with "ND" laboratory qualifier

E:

Table 1: Summary of VOCs in Soil

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Residential Land Use.
4. Ohio VAP GDCS Commercial/Industrial Land Use.
5. Ohio VAP GDCS Construction/Excavation Activities.
6. Supplemental criteria from the Ohio VAP CIDARS.
7. Ohio EPA VAP Derived Leach-Based Soil Values for Soil Type II, TGM October 2008

Bold numbers indicate a concentration above laboratory reporting limits.

Bold and shaded numbers indicate a detected concentration above a comparison standard.

NE - No existing standard per the referenced agency

Laboratory Qualifiers:

ND: Not Detected at the Reporting Limit

All results were coded with "ND" laboratory qualifier

E:

Table 1: Summary of VOCs in Soil

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Residential Land Use.
4. Ohio VAP GDCS Commercial/Industrial Land Use.
5. Ohio VAP GDCS Construction/Excavation Activities.
6. Supplemental criteria from the Ohio VAP CIDARS.
7. Ohio EPA VAP Derived Leach-Based Soil Values for Soil Type II, TGM October 2008

Bold numbers indicate a concentration above laboratory reporting limits.

Bold and shaded numbers indicate a detected concentration above a comparison standard.

NE - No existing standard per the referenced agency

Laboratory Qualifiers:

ND: Not Detected at the Reporting Limit

All results were coded with "ND" laboratory qualifier

E:

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Residential Land Use.
4. Ohio VAP GDCS Commercial/Industrial Land Use.
5. Ohio VAP GDCS Construction/Excavation Activities.
6. Supplemental criteria from the Ohio VAP CIDARS.
7. Ohio EPA VAP Derived Leach-Based Soil Values for Soil Type II, TGM October 2008

Bold numbers indicate a concentration above laboratory reporting limits.

Bold and shaded numbers indicate a detected concentration above a comparison standard.

NE - No existing standard per the referenced agency

Laboratory Qualifiers:

ND: Not Detected at the Reporting Limit

All results were coded with "ND" laboratory qualifier

E:

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Residential Land Use.
4. Ohio VAP GDCS Commercial/Industrial Land Use.
5. Ohio VAP GDCS Construction/Excavation Activities.
6. Supplemental criteria from the Ohio VAP CIDARS.
7. Ohio EPA VAP Derived Leach-Based Soil Values for Soil Type II, TGM October 2008

Bold numbers indicate a concentration above laboratory reporting limits.

Bold and shaded numbers indicate a detected concentration above a comparison standard.

NE - No existing standard per the referenced agency

Laboratory Qualifiers:

ND: Not Detected at the Reporting Limit

All results were coded with "ND" laboratory qualifier

E:

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Residential Land Use.
4. Ohio VAP GDCS Commercial/Industrial Land Use.
5. Ohio VAP GDCS Construction/Excavation Activities.
6. Supplemental criteria from the Ohio VAP CIDARS.
7. Ohio EPA VAP Derived Leach-Based Soil Values for Soil Type II, TGM October 2008

Bold numbers indicate a concentration above laboratory reporting limits.

Bold and shaded numbers indicate a detected concentration above a comparison standard.

NE - No existing standard per the referenced agency

Laboratory Qualifiers:

ND: Not Detected at the Reporting Limit

All results were coded with "ND" laboratory qualifier

E:

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Residential Land Use.
4. Ohio VAP GDCS Commercial/Industrial Land Use.
5. Ohio VAP GDCS Construction/Excavation Activities.
6. Supplemental criteria from the Ohio VAP CIDARS.
7. Ohio EPA VAP Derived Leach-Based Soil Values for Soil Type II, TGM October 2008

Bold numbers indicate a concentration above laboratory reporting limits.

Bold and shaded numbers indicate a detected concentration above a comparison standard.

NE - No existing standard per the referenced agency

Laboratory Qualifiers:

ND: Not Detected at the Reporting Limit

All results were coded with "ND" laboratory qualifier

E:

Table 1: Summary of VOCs in Soil
Euclid-Woodlawn Redevelopment Site, East Cleveland, Cuyahoga County, Ohio

Sample ID (Depth[1])		*Ohio EPA Generic Leach-Based Soil Values*	*VAP Standards*			F-4 (6-8)	DUP-2 (F-4 [6-8])	F-4 (8-10)	F-5 (4-6)	DUP-1 (F-5 [4-6])	F-5 (6-8)	PMW-200 (6-8)	PMW-200 (8-10)	PMW-201 (2-4)	PMW-201 (8-10)	PMW-202 (6-8)	PMW-202 (10-12)	H-4 (2-4)	DUP-07012024 (2-4) (H-4 [2-4])	H-4 (10-12)	G-2.5 (2-4)	DUP-07012024 (G-2.5 [2-4])	G-2.5 (4-6)	DUP-07012024 (4-6) (G-2.5 [4-6])	G-3.5 (4-6)	G-3.5 (6-8)	I-3.5 (4-6)
Collection Date		*Soil Type II [7]*	*Residential Land Use [3]*	*Commercial/ Industrial Land Use[4]*	*Construction & Excavation Activities [5]*	05/14/24	05/14/24	05/14/24	05/14/24	05/14/24	05/14/24	06/05/24	06/05/24	06/05/24	06/05/24	06/05/24	06/05/24	07/01/24	07/01/24	07/01/24	07/01/24	07/01/24	07/01/24	07/01/24	07/01/24	07/01/24	07/01/24

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Residential Land Use.
4. Ohio VAP GDCS Commercial/Industrial Land Use.
5. Ohio VAP GDCS Construction/Excavation Activities.
6. Supplemental criteria from the Ohio VAP CIDARS.
7. Ohio EPA VAP Derived Leach-Based Soil Values for Soil Type II, TGM October 2008

Bold numbers indicate a concentration above laboratory reporting limits.

Bold and shaded numbers indicate a detected concentration above a comparison standard.

NE - No existing standard per the referenced agency

Laboratory Qualifiers:

ND: Not Detected at the Reporting Limit

All results were coded with "ND" laboratory qualifier

E:

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Residential Land Use.
4. Supplemental criteria from the Ohio VAP CIDARS.
5. Ohio EPA VAP Derived Leach-Based Soil Values for Soil Type II, TGM October 2008

Bold numbers indicate a concentration above laboratory reporting limits.
Bold and shaded numbers indicate a detected concentration above a comparison standard.
NE - No existing standard per the referenced agency

Chlorobenzene	mg/l	*100*	< 0.10	< 0.10
Tetrachloroethene	mg/l	*0.7*	< 0.10	**0.1**
Trichloroethene	mg/l	*0.5*	< 0.10	**4.6**
Vinyl chloride	mg/l	*0.2*	< 0.10	< 0.10
Chloroform	mg/l	*6*	< 0.10	< 0.10

Notes:

1. mg/kg = milligrams per kilogram (or ppm)

2. US EPA: Defining Hazardous Waste: 40 CFR Section 261.24

Bold numbers = concentration above detection limits.

Bold and shaded = concentration above a comparison standard.

Re: **Euclid-Woodlawn Redevelopment; 2296-16** Work Order: **24050737**

Dear Jeremy,

ALS Environmental received 78 samples on 16-May-2024 12:45 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 210.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Rob Nieman

Electronically approved by: Rob Nieman

Work Order:	24050737

Case Narrative

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Results relate only to the items tested and are not blank corrected unless indicated.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

ALS is an EPA recognized NLLAP laboratory for lead paint, soil, and dust wipe analyses under its AIHA-LAP accreditation.

The following samples were analyzed in this batch:

24050737-31A	24050737-64A	24050737-75A
24050737-76A	24050737-77A	24050737-78A

Note: See Qualifiers Page for a list of Qualifiers and their explanation.

ALS Environmental

Date: 30-May-24

Client: Partners Environmental Consulting, Inc.
Project: Euclid-Woodlawn Redevelopment; 2296-16
WorkOrder: **24050737**

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

Acronym	Description
DUP	Method Duplicate
E	EPA Method
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit
MQL	Method Quantitation Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PDS	Post Digestion Spike
PQL	Practical Quantitaion Limit
SDL	Sample Detection Limit
SW	SW-846 Method

Units Reported	Description
% of sample	
µg/L	
mg/Kg-dry

Re: **Euclid Woodlawn Redev; 2296.16** Work Order: **24060278**

Dear Halle,

ALS Environmental received 6 samples on 07-Jun-2024 02:00 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 28.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Rob Nieman

Electronically approved by: Rob Nieman

Re: **2296.16; Euclid-Woodlawn Redevelopment** Work Order: **24060629**

Dear Jeremy,

ALS Environmental received 8 samples on 17-Jun-2024 01:40 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 32.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Rob Nieman

Electronically approved by: Rob Nieman

Case Narrative

The analyses requested were analyzed according to Ohio Voluntary Action Program requirements. Affidavits are available upon request.

The analytical data provided relates directly to the samples received by ALS Laboratory Group and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

Acronym	Description
DUP	Method Duplicate
E	EPA Method
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
MBLK	Method Blank
MDL	Method Detection Limit

Re: **Euclid Woodlawn Redevelopment Site; 2296.16** Work Order: **24070148**

Dear Chris,

ALS Environmental received 33 samples on 03-Jul-2024 01:20 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Laboratory Group. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 96.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Rob Nieman

Electronically approved by: Rob Nieman

Case Narrative

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Results relate only to the items tested and are not blank corrected unless indicated.

QC sample results for this data met laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

ALS is an EPA recognized NLLAP laboratory for lead paint, soil, and dust wipe analyses under its AIHA LAP accreditation.

Batch 101173, Method 6010_METCLP_S, Sample LCSD-101173: Cr failed high all samples are BDL.

Batch R231724, Method 8260_VOC_5035, Sample 24070148-01A: Surrogates outside of QC range due to matrix.

Batch R231724, Method 8260_VOC_5035, Sample 24070148-02A: Surrogates outside of QC range due to matrix.

Batch R231724, Method 8260_VOC_5035, Sample 24070148-07A: Surrogates outside of QC range due to matrix.

Batch R231724, Method 8260_VOC_5035, Sample 24070148-09A: Surrogates outside of QC range due to matrix.

Batch R231724, Method 8260_VOC_5035, Sample 24070148-12A: Surrogates outside of QC range due to matrix.

Batch R231724, Method 8260_VOC_5035, Sample 24070148-18A: Surrogates outside of QC range due to matrix.

Batch R231779, Method 8260_VOC_5035, Sample 24070148-05A: Acetone reported above calibration due to the high level dilution yield below the reporting level. The select surrogate outside QC range due to sample matrix.

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte detected below quantitation limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL

Acronym	Description
DUP	Method Duplicate
E	EPA Method
LCS	Laboratory Control Sample

Activities Conducted During This Closure

On June 21, 2022, complete removal was conducted for one (1) abandoned 1,000-gallon steel gasoline UST. Based on review of Sanborn fire insurance maps and records as part of environmental assessment activities, the UST was used for gasoline by Economy Buick, auto sales and service, from 1930 through the 1940's. No piping or dispensers were present.

No liquids were present in the tank. Sand and sediment were observed in the tank. Upon removal, the steel UST was observed to be in poor condition with several holes. The UST was cleaned, compacted, and removed from the subject property for disposal at a landfill.

All sandy soil material was removed from the UST cavity and temporarily staged on plastic in an area adjacent to the excavation. The fill material from the UST cavity was not visibly stained. No odors were noted. Samples collected from the excavation and the stockpiled fill material in accordance with Ohio Administrative Code (OAC) Rules 1301:7-9-17.

The excavation was backfilled with crushed limestone to the surface. Approximately 43 cubic yards of crushed limestone were used.

Date The UST Was Last Used: 1940s

Person (Company) That Last Used the UST: Economy Buick

Underground Storage Tank (UST) System Data

TANK #	DATE INSTALLED	CAPACITY	PRODUCT	CONST. MATERIAL	TANK STATUS*	DATE REMOVED
1		1000	GASOLINE	STEEL	R	6/21/2022

STATUS:** ***CIP *= Closed-in-Place,* ***CIS =*** *Change-in-Service,* ***CIU =*** *Currently-In-Use,* ***R*** *= Removed,* ***RE*** *= Replaced,* ***OOS<90*** *= Out-of-Service < 90 days,* ***OOS>90*** *= Out-of-Service > 90 days,* ***OOS>12*** *= Out-of-Service > 12 months*

Closure Conclusions

Select one of the following:

☐ A Tier 1 Source Investigation is required

☒ No Further Action is requested

Analytical Group For This Closure

CHEMICALS OF CONCERN (Analytical Group):

☒ Group 1	☐ Group 2	☐ Group 3	☐ Group 4	☐ Group 5
If Group 5, explain:				

Sample Data

SAMPLE COLLECTION PROCEDURES

Sampling method and equipment:

Soil samples were collected for field screening and laboratory analysis in accordance with OAC Rules 1301:7-9-12. The samples were split into two (2) portions, one (1) for field screening and the second for potential submission to the laboratory for testing. The bucket of the excavator was used to recover soil from the sides and bottom of the excavation. The soil samples were collected by hand from soil in the bucket of the excavator by breaking the soil apart and collecting material from fresh surfaces. The soil samples were obtained from portions of the soil not touching the bucket of the excavator to avoid cross-contamination. New disposable nitrile gloves were worn to collect soil at each sample location. One portion of the sample was placed in a sealable plastic bag for field screening, and a second portion was placed in two (2), four (4) ounce laboratory supplied glass jars with Teflon lined lids and kept in a cooler with ice.

Sampling preservation:

Laboratory samples were placed in two (2), four (4) ounce laboratory supplied glass jars with Teflon lined lids and kept in a cooler with ice. The samples were shipped overnight under a chain-of-custody to Pace Analytical Labs in Mount Juliet, Tennessee.

FIELD SCREENING

Instrument used: RKI GX-6000-Photoionization Detector (PID) equipped with a 10.6 eV lamp

Methodology:

Soil grab samples collected for field screening were sealed in a re-sealable plastic bag and allowed equilibrate at ambient temperature for approximately 15-30 minutes prior to screening with the PID.

Calibration procedure:

The RKI PID was calibrated in the field each day of use following the manufacturer's protocol. The instrument was calibrated using ambient air and 100 parts per million standard isobutylene gas supplied by the manufacturer.

Groundwater Data

Answer the following:

Yes	No	N/A	
☐	☒		Was water present in excavation?
☐	☐	☒	Was the water evacuated from the cavity?
☐	☐	☒	Was a water sample collected prior to evacuation?
☐	☐	☒	Did the water recharge after evacuation?
☐	☐	☒	Was a water sample collected after evacuation?
☐	☒	☐	Was free product discovered during the closure?

If water was present in the excavation and no sample was collected, explain:

NA

Soil Classification

Select <u>one</u> of the following:

☒ SOIL CLASS 1 (USCS soil symbols GW, GP, GM, GC, SW, SP, SM)

NOTE: Geotechnical laboratory analysis documentation must be provided if soil class 2 or 3 is selected.

☐ SOIL CLASS 2 (USCS soil symbols SC, ML, CL, OL, MH)

☐ SOIL CLASS 3 (USCS soil symbols CH, OH, PT)

TPH (C20-C34)			N/A	N/A	N/A		5,000
OTHER: Methylene Chloride			N/A	<0.0356	**0.0138**		N/A

NOTES:

Concentrations are reported in mg/kg for soil and mg/l for water.
Soil results are to be reported on a dry weight basis.
Soil action levels are for Class 1 Soils
For samples that have concentrations less than detection limits, list the detection limit (e.g. < 0.005).
If action levels are exceeded, conduct a Tier 1 Source Investigation pursuant to OAC 1301:7-9-13(H).

CHEMICALS OF CONCERN AND RECOMMENDED LABORATORY METHODS

Analytical Group 1: Light distillate products including unleaded gasoline, leaded gasoline, gasoline blended with alcohol, racing fuel, and aviation gasoline

Analytical Group 2: Middle distillate products including diesel, biodiesel blended with diesel, light fuel oils, stoddard solvents, mineral spirits, kerosene, and jet fuels

Analytical Group 3: Heavy petroleum distillate products including, but not limited to, lubricating and hydraulic oils

Analytical Group 4: Used oil

Analytical Group 5: Unknown petroleum products or petroleum products other than those listed in analytical groups 1, 2, 3 and 4. Additional chemical(s) of concern and analytical methods must be selected, as appropriate, based on reasonably available information related to the product stored, including additives, impurities and degradation products. In addition, chemical(s) of concern should be selected based on their toxicity, mobility, and persistence in the environment. The owners and operators shall consult with the state fire marshal for the appropriate chemical(s) of concern for products not in analytical group 1, 2, 3 and 4.

	Analytical Group Number	1	2	3	4	5	**Analytical Methods[7]**	
		Light Distillates	Middle Distillates	Heavy Distillates	Used Oil	Unknowns & Others	Soil [4]	Groundwater
	Chemical							
Aromatics	Benzene	x	x		x		8021, 8260	8021, 8260
	Toluene	x	x		x			
	Ethylbenzene	x	x		x			
	o, m and p-Xylenes	x	x		x			
	Naphthalene	x			x			
	1,2,4 - Trimethylbenzene	x			x			
Additives	(MTBE)	x			x		8021,8260	8021, 8260
	1,2 – Dibromoethane (EDB) [5,6]	x			x		8260	8011
	1,2 – Dichloroethane (EDC) [5,6]	x			x		8260	8260
Polynuclear Aromatics	Benzo(a)anthracene		x	x	x		8270, 8310	8270, 8310
	Benzo(a)pyrene		x	x	x			
	Benzo(b)fluoranthene		x	x	x			
	Benzo(k)fluoranthene		x	x	x			
	Chrysene		x	x	x			
	Dibenz(a,h)anthracene		x	x	x			
	Indeno(1,2,3-c,d)pyrene		x	x	x			
	Naphthalene		x	x	x			
Chlorinated Hydrocarbons	Volatile Organic Hydrocarbons				x		8260	8260
Total Petroleum Hydrocarbons [1]	TPH (C6 – C12)	x			x		8015	N/A
	TPH (C10 – C20)		x		x			
	TPH (C20 – C34)			x	x			
	Varies based on UST contents [2]			x	x	x [3]		

1 TPH analysis is not required for groundwater samples.
2 Additional chemicals of concern should be based on Material Safety and Data Sheets (MSDS) and analyzed with an appropriate laboratory test method capable of meeting established target levels.
3 Refer to paragraph (H)(1)(c)(v).
4 Soil analytical results shall be reported on a dry weight basis.
5 EDB and EDC shall be analyzed for automotive gasoline USTs that were in service prior to January 1, 1996.
6 EDB and EDC shall be analyzed for all USTs containing aviation gasoline, racing fuel, and used oil.
7 Alternate laboratory methods will be considered if the methods meet the quality control, performance and method detection level requirements.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.

SCOPE, LIMITATION, OBLIGATIONS AND RESPONSIBILITIES OF CERTIFICATION ON REVERSE SIDE (Certificate 1 of 2)

Scope. This certificate applies only to the Ohio EPA Voluntary Action Program. The certified laboratory identified herein is authorized to perform analyses in support of a voluntary action for the analytes, parameter groups, and methods which are identified on the face of this certificate in order to produce certified data, so long as this certificate remains effective. The laboratory may produce certified data when it performed the analyses consistent with the standard operating procedures and quality assurance program plan, as revised, or as revised following the review process required by OAC rule 3745-300-04(G). For parameter groups, this certificate authorizes analysis of only those compounds listed in the methods identified.

**This certificate authorizes the laboratory to perform analyses for Total Petroleum Hydrocarbons (Light Distillates) and Volatile Organic Compounds on air and soil gas, as well as, soil and water media. This certification is conditioned on the laboratory performing the analyses in accordance with the identified methods and the laboratory's standard operating procedures approved for such analyses.

Limitation. This certificate does not apply to any other Ohio EPA program, or federal laboratory certification or accreditation program, nor does it serve any purpose other than that described in the "Scope" section. This certificate does not authorize for the analysis of compounds which may meet a general criteria or description provided for in such methods, but are not listed. This certificate is subject to renewal under OAC rule 3745-300-04.

Obligations. As a condition of certification, the certified laboratory accepts all obligations and responsibilities of a certified laboratory in the Voluntary Action Program, as set forth in ORC chapter 3746 and OAC chapter 3745-300, including compliance with the standards of performance and conduct for maintaining certification under OAC rule 3745-300-04(H). The certified laboratory must display the original certificate in a prominent location on its premises.

Revocation or Suspension. This certificate is subject to suspension or revocation in accordance with OAC rule 3745-300-04(O). The authorization provided by this certificate ceases upon the effective date of the suspension or revocation.

This certificate is the property of Ohio EPA and must be surrendered to Ohio EPA upon the revocation or suspension of the laboratory's certification.

APPENDIX F
LABORATORY ANALYSIS SUMMARY FORM

LABORATORY ANALYSIS QA/QC SUMMARY FORM

(To be included with each laboratory chemical analysis report)

SAMPLE RECEIPT

Was the chain of custody present for all samples?	Yes ☒ No ☐
Sampler name included?	Yes ☒ No ☐
Sampler signature included?	Yes ☒ No ☐
Sample date included?	Yes ☒ No ☐
Sample time included?	Yes ☒ No ☐
List the preservation method(s):	ICE
List the cooler temperature upon receipt:	1.9 °F ☐ °C ☒
Was headspace present in any sample vials?	Yes ☐ No ☐ NA ☒
Were the soil sample containers filled?	Yes ☒ No ☐ NA ☐
Were sample containers tightly sealed?	Yes ☒ No ☐
Were the correct laboratory containers used?	Yes ☒ No ☐

SAMPLE ANALYSIS

Were all analysis performed using SW-846 & ASTM methods? If not, identify the other methods used:	Yes ☒ No ☐
Were dates of sample extraction provided?	Yes ☒ No ☐
Were the matrix spike results within the control limit range established by the USEPA?	Yes ☒ No ☐
Were surrogate recoveries within the control limit range established by the USEPA?	Yes ☒ No ☐
Were control samples used to establish appropriate control limits for precision and bias?	Yes ☒ No ☐
Were instrument blanks, calibration standards, and method blanks submitted and analyzed?	Yes ☐ No ☒
Were matrix spike samples analyzed and either matrix spike duplicates or matrix duplicate samples analyzed?	Yes ☐ No ☒
Were the following QC samples used for each analytical batch:	
Lab control samples	Yes ☒ No ☐
Method blanks	Yes ☒ No ☐
Matrix spikes	Yes ☐ No ☒
Matrix spike duplicates or matrix duplicates	Yes ☐ No ☒
Were there any problems noted with surrogate recovery, % recovery, or % RSD? If so, list sample IDs: S-1, S-2, SP-2, SP-4, SP-6	Yes ☒ No ☐
Were there any data qualifiers noted by the lab? If so, list sample IDs: S-1, S-2, SP-2, SP-4, SP-6	Yes ☒ No ☐

LAB CERTIFICATION

Is the laboratory affiliated with the sampling company?	Yes ☐ No ☒
Check lab certification that applies: ☐ Ohio EPA DDGW ☒ Ohio EPA VAP ☐ NELAP ☐ A2LA ☐ Other (list):

1.0 INTRODUCTION

Partners was contracted by the Cuyahoga County Land Reutilization Corp. (CCLRC, Client) to conduct a Limited Phase II Investigation (Phase II) at the Former Gasoline Filling Station Site located at 12500 Euclid Avenue in the City of East Cleveland, Cuyahoga County, Ohio (Property).

The Property consists of an L-shaped parcel measuring 0.36-acres located at the northeast corner of Euclid Avenue and Lakeview Road. The Property is currently vacant and was most recently occupied by AutoMax used car sales. The Property was developed for residential and commercial purposes prior to 1913. From 1926 through 1941, Economy Buick occupied the north portion of the Property and adjoining parcel to the north. The buildings were razed, and by 1967, the existing building had been constructed for use as a gasoline service station. The Property operated as a gasoline station from 1967 to 1973 and has been used for auto sales and service intermittently from 1974 to the present. The Property is comprised of one (1) parcel, designated as Permanent Parcel Number (PPN) 67213009, which is owned by 12500 Euclid Avenue LLC. The assessment was conducted in general accordance with the Ohio Environmental Protection Agency (EPA) Voluntary Action Program (VAP) protocol but was not completed as if the Property was on the VAP track.

2.0 PREVIOUS INVESTIGATIONS

Partners prepared a Phase I ESA report titled *Phase I Environmental Site Assessment, Former Gasoline Filling Station, 12500 Euclid Avenue, East Cleveland Ohio,* dated October 13, 2021. The Phase I ESA revealed the following RECs in connection with the Property:

- **Former Use as a Gasoline Filling Station and Auto Repair:** The Property operated as a gasoline station from 1967 to 1973 and has been used for auto sales and service intermittently from 1974 to the present. Information from the East Cleveland Fire Department indicates that one (1) 6,000-gallon gasoline underground storage tank (UST), one (1) 3,000-gallon gasoline UST, and one (1) 1,000-gallon used oil UST were located at the Property. Records indicate that in 1973 filling station operations ceased and the USTs were removed. In 2001, hydraulic lifts were removed from within the building. Soil samples were obtained from beneath the lifts at a depth of 10 to 11 feet below the ground surface (bgs) and were analyzed for total petroleum hydrocarbons (TPH) by USEPA Method 418.1, which does not differentiate light (C6-C12), medium (C10-C20), and heavy (C20-C34) petroleum fractions. TPH concentrations were below applicable comparison standards. However, the potential exists that the hydraulic oil used in the lifts contained polychlorinated biphenyls (PCBs). The soil samples collected were not analyzed for PCBs.

- **Known Soil Gas Contamination at North Adjoining Site:** In 2019, Partners conducted subsurface investigations at the north adjoining site due to the past uses including dry cleaning, printing, and auto repair. As part of that work, Partners advanced soil borings, groundwater monitoring wells, sub-slab vapor points, and soil gas points. Soil gas testing at the southern boundary of the adjoining site showed an elevated concentration of trichloroethene (TCE), adjacent to the Property.

3.0 LIMITED PHASE II INVESTIGATION ACTIVITIES

The findings of the Phase I ESA were considered while preparing the Limited Phase II scope of work. It is Partners' understanding that the Property and the existing building will be renovated for commercial use. Therefore, future receptor pathways at the Property may include commercial workers, and construction/excavation workers.

3.1 General Scope

The Limited Phase II activities included soil and groundwater sampling and laboratory analysis. Partners advanced eight (8) soil borings (SB-01 through SB-06, MW-01 and MW-02). Two (2) borings were

Copyright © 2022, Partners

completed as temporary groundwater monitoring wells (MW-01 and MW-02). Additionally, a ground penetrating radar (GPR) survey was completed in the area of the former mapped USTs.

Prior to initiating field activities, Partners prepared a *Sampling and Analysis Plan* (SAP) dated October 13, 2021. The SAP was submitted to the United States Environmental Protection Agency (USEPA) and the Client for review and approval. The USEPA approved the SAP without revision in correspondence dated October 14, 2021. The Limited Phase II Investigation was conducted in accordance with the SAP and the USEPA approved Quality Assurance Project Plan (QAPP) prepared by Partners.

3.2 Methods of Assessment

3.2.1 Ground Penetrating Radar (GPR) Survey

On October 26, 2021, Partners met with the GPR contractor (Blood Hound, LLC) to check for the presence of USTs. The area of the USTs, located in the northern portion of the Property as indicated in Fire Department records, was surveyed on an approximate five (5)-foot grid line spacing. Information from Bloodhound is attached in **Appendix A**.

3.2.2 Soil Boring, Sampling, Field Screening and Analysis

On October 26, 2021, soil borings were advanced using a truck-mounted, direct push technology (Geoprobe™) sampling system. The borings were sampled continuously from the ground surface to depths of approximately 12 feet below ground surface (bgs). The Geoprobe™ drives a two (2)-inch outside diameter (OD), stainless steel tube containing a new disposable acetate liner into the subsurface to obtain soil samples. The soil is forced into the liner at continuous four (4)-foot intervals and is then retrieved to the surface. Each four (4)-foot soil sample was further divided into two (2) foot sample intervals, visually observed, sampled, logged, and classified according to the Unified Soil Classification System (USCS) by a member of Partners' field staff. The boring locations are depicted on **Figure 2** and soil boring logs are included in **Appendix B**.

Soil samples were divided into two (2) portions. One (1) portion was placed in new two (2) or four (4)-ounce, pre-cleaned glass jars with Teflon® lined lids, and the second portion was placed in a new re-sealable plastic bag for field screening purposes. Soil samples for volatile organic compounds (VOC) analysis were collected in the field via Method 5035 using TerraCore™ style samplers and a 40 milliliter (ml) amber glass vial containing methanol (one [1] each). Samples placed in the glass jars were labeled and placed in a cooler containing ice, pending submission to an Ohio EPA VAP certified laboratory for chemical analysis. New disposable nitrile gloves were worn and changed between each sample to prevent possible cross-contamination. The sampling equipment was decontaminated between sampling events with an Alconox® detergent rinse.

Soil samples were field screened for the presence of organic vapors using a MiniRAE 3000 Photoionization Detector (PID), manufactured by Honeywell RAE Systems. The PID was calibrated prior to field activities using a known concentration of a gas standard in accordance with the manufacturers' specifications. Soil sample PID readings are included on the soil boring logs in **Appendix B**.

Soil borings were properly abandoned at the completion of field activities by filling each to the surface with excess soil cuttings and hydrated bentonite chips. The soil borings were finished at the surface with like surfacing materials (e.g., concrete/asphalt patch).

Select soil samples were submitted for laboratory analysis based on a combination of historical information, field observations (visual or odor), PID screening results, the most likely depth of a release, and/or the potential point of compliance. Based on the conditions under assessment, selected soil samples were analyzed for the following parameters:

- Volatile Organic Compounds (VOCs) by USEPA Method 8260 (16 samples)
- Polynuclear Aromatic Hydrocarbons (PAHs) by USEPA Method 8270 (5 samples)
- Total Petroleum Hydrocarbons (TPH C_6-C_{34}) by USEPA Method 8015 (16 samples)
- Polychlorinated biphenyls (PCBs) by USEPA Method 8081 (5 samples).

Copyright © 2022, Partners

Soil samples were labeled, placed in an iced cooler, and submitted for analysis under appropriate chain-of-custody control to Pace Analytical, a VAP Certified Laboratory (CL0069), located in Mt. Juliet, Tennessee. The laboratory analytical report is included in **Appendix C**.

3.2.3 Temporary Groundwater Monitoring Well Installation, Sampling, and Analysis

Two (2) of the soil borings were completed as temporary groundwater monitoring wells (MW-01 and MW-02). The monitoring wells were installed to a depth of approximately 12 feet bgs using the direct push tooling and an expendable point. Groundwater monitoring well MW-01 was installed in the northern portion of the Property and MW-02 was installed in the north-central portion of the Property in the area of the former dispensers. Temporary monitor well locations are depicted on **Figure 2**.

The monitoring wells were constructed with one (1)-inch inside diameter (ID) polyvinyl chloride (PVC) screen and riser pipe. The screen (10 slot) was five (5)-feet long and positioned to span the potential groundwater interface. The annular space was filled with sand to approximately two (2) feet above the screen and then with bentonite to within one (1) foot of the surface.

On October 27, 2020, the wells were measured using a Solinst interface probe to determine depth to groundwater and as a check for the presence of a light non-aqueous phase liquids (LNAPL) and dense non-aqueous phase liquids (DNAPL).

Because to the temporary well construction method, the wells were sampled using manual bailing methods. A dedicated, disposable polyethylene bailer was used at each location to purge the well. During purging, a YSI water quality meter was used to measure the temperature, pH, specific conductivity, turbidity, dissolved oxygen and oxygen-reduction potential (ORP) of the water at approximately 0.5 liter intervals while purging. The wells were purged until three (3) casing volumes were removed or they were purged dry. Samples were collected once purge volumes were reached and/or the monitor wells were allowed to sufficiently recharge. Groundwater Sampling Logs are included in **Appendix D**.

Groundwater samples were collected and submitted for laboratory analyses of the following parameters:

- VOCs by USEPA Method 8260 (two [2] samples)
- PAHs by USEPA Method 8270 (two [2] samples)

Groundwater samples were labeled, placed in an iced cooler, and submitted for analysis under appropriate chain-of-custody control to Pace Analytical, a VAP Certified Laboratory (CL0069), located in Mt. Juliet, Tennessee. The laboratory analytical report is included in **Appendix C**.

Upon completion of groundwater sampling activities, the monitor well casing and screen was pulled from the borehole and sealed with bentonite to the surface. The minimal volume of purged groundwater from each temporary well location was used to hydrate the bentonite.

3.2.4 Investigation Derived Waste

No excess investigation derived wastes were generated during this project.

4.0 POTENTIALLY APPLICABLE COMPARISON STANDARDS

Although the Property is not going through the Ohio EPA Voluntary Action Program (VAP), the program has promulgated standards under state environmental law that establish levels that are considered protective of human health and the environment. These standards were used for evaluation of Property conditions. Partners understands that the planned land use of the Property is likely to be for commercial purposes.

Evaluation of Soil

The VAP Generic Numerical Direct Contact Soil Standards (GDCS) for the Commercial/Industrial Land Use Category and the Construction/Excavation Activities Category (Ohio Administrative Code [OAC] 3745-300-08) were used for evaluation of the results of soil analyses. Constituents for which no GDCS have been derived were compared to the Ohio EPA VAP Chemical Information Database and Applicable Regulatory Standards (CIDARS), Supplemental Criteria. TPH concentrations in soil were evaluated using the TPH Saturation Concentration, coarse grained soils (OAC 3745-300-09(D)(2)(b)).

Copyright © 2022, Partners

Evaluation of Groundwater

Results of groundwater sampling was compared to the USEPA Vapor Intrusion Screening Levels (VISL) Target Groundwater Concentrations for commercial land use with a carcinogenic risk of 1E-5, hazard quotient of 1, an attenuation factor (AF) of 0.001, and a groundwater temperature of 11 degrees Celsius in accordance with the Ohio EPA document *Sample Collection and Evaluation of Vapor Intrusion to Indoor Air for Remedial Response, RCRA and VAP.*

As the Property is located within the Cleveland City-Wide Urban Setting Designation (USD) which establishes that groundwater is not and will not likely be used as a drinking water source, the Ohio VAP generic and risk-based Unrestricted Potable Use Standards (UPUS) are not applicable standards for the Property.

5.0 FINDINGS

5.1 Ground Penetrating Radar (GPR Survey)

The results of the GPR survey showed no apparent indications of the presence of USTs within the survey area. The GPR survey identified two (2) linear anomalies in the northern portion of the Property likely to be associated with utilities. Based on the locations of the linear anomalies it is not likely that they are associated with UST piping. The gridded area and anomalies are shown on **Figure 4** and information from Bloodhound is attached in **Appendix A**.

5.2 Subsurface Conditions

The subsurface profile may be generalized as sporadic surficial fill followed by native deposits of sand and then shale. Soil boring logs are included in **Appendix B**.

Fill materials typically consisted of approximately one (1) to 2.75-feet of brown fine sand or sandy clay with some gravel, brick and/or slag fragments as encountered at borings SB-01, SB-03, SB-05 and SB-06. At SB-04, concrete and brick debris were encountered beneath the asphalt surface.

Native soils consisted of brown fine/fine to medium sands to depths ranging from about 10.2 to 12 feet bgs. Brown fine to coarse sand with gravel was encountered at a depth of 11.5 feet at SB-03, and a gray clay seam was encountered at a depth of 8.2 to 8.8 feet at boring MW-01. Gray weathered shale bedrock was encountered at depths ranging from 10.2 to 11.5 feet at SB-02, SB-04, SB-05, SB-06 and MW-02. Shale was not encountered at the remaining boring locations.

Gray-stained fine sand with petroleum odors were encountered at SB-05 (8-10 feet bgs). No petroleum or chemical odors and/or staining were noted in the soil samples at the remaining boring locations. With the exception of SB-05, PID readings were less than 1.5 part per million (ppm). At SB-05, elevated PID readings of 102.5 ppm (6-8 feet) and 308.9 ppm (8-10 feet) were encountered. These elevated readings correlate with the gray staining and petroleum odors present at this location.

Groundwater encounter was apparent during drilling at depths ranging from eight (8) to 9.7 feet bgs. Groundwater was not encountered during drilling at SB-04 and MW-01. After 24 hours, groundwater was present in the temporary monitoring wells at depths of 10.6 feet bgs (MW-01) and 9.7 feet bgs (MW-02). During monitor well purging activities, the temporary wells were bailed dry, and recharge was relatively slow.

6.0 RESULTS OF ANALYTICAL TESTING

6.1 Soil Analytical Results

The results of the soil analytical testing are presented in **Table 1 and Table 2**. The laboratory analytical reports are included in **Appendix C**.

VOCs: Results of analytical testing indicate that 22 VOC analytes were detected in the soil samples at concentrations above laboratory method detection limits (MDLs). All detected VOC concentrations were below the respective GDCS cited for comparison.

Copyright © 2022, Partners

PAHs: Results of analytical testing indicate that 17 PAH analytes were detected in the soil samples at concentrations above laboratory MDLs. All detected PAH concentrations were below the respective GDCS cited for comparison.

TPH: All TPH fractions were present in the soil samples below comparison standards.

PCBs: One (1) PCB analyte (PCB 1260) was detected in the soil samples at concentrations above laboratory MDLs. All detected PCB concentrations were below the respective GDCS cited for comparison.

6.2 Groundwater Analytical Results

The results of the groundwater analytical testing are presented in **Table 3**. The laboratory analytical reports are included in **Appendix C**.

VOCs: Results of analytical testing indicate that 11 VOC analytes were detected in the groundwater samples at concentrations above laboratory MDLs. With the exception TCE, all detected VOC concentrations were below the VISL Target Groundwater Concentrations for commercial land use.

The concentrations of TCE in MW-01 (0.101 mg/l) and MW-01 Duplicate (0.0866 mg/l) exceed the VISL standard of 0.0416 mg/l. MW-01 is located at the north Property corner adjacent to the known off-Property soil gas exceedance.

7.0 LIMITATIONS

The analytical results and conclusions presented in this report are based on the completion of eight (8) soil borings and two (2) temporary monitoring wells and limited soil and groundwater testing. Although the results presented above provide a reasonable indication of conditions in the areas evaluated, they may not be indicative of conditions in areas of the Property not evaluated by Partners.

8.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the Limited Phase II Investigation activities and information contained in this report, Partners presents the following summary and conclusions regarding the Property.

Subsurface Profile

The subsurface profile may be generalized as areas of surficial sandy fill underlain by sandy soils and shale bedrock. Groundwater was encountered during drilling at depths between about eight (8) and 10 feet bgs.

Soil Testing

Based on the results of analytical testing, soils have not been impacted by VOCs, PAHs, PCBs, or TPH at concentrations exceeding the GDCS for the Commercial/Industrial Land Use or Construction/Excavation Activities or TPH Saturation Concentrations.

Groundwater Testing

Based on the results of analytical testing, the concentrations of TCE in the groundwater at MW-01 exceed the respective VISL value for commercial use. The presence of TCE in the groundwater on the Property represents a vapor intrusion risk to potential on-Property commercial receptors. MW-01 is located at the north Property corner adjacent to the known off-Property soil gas exceedance.

Recommendations

Depending on future development plans for the Property, mitigation of the vapor intrusion risk identified in the northwestern portion of the Property (MW-01) may be necessary through the installation of a vapor barrier or sub-slab depressurization system.

Notes

mg/l = Milligrams per liter - parts per million (ppm).

USEPA VISL Target Groundwater Concentration for Commercial Use.

NE: No standard established by Ohio EPA; **NSV**: Not sufficiently volatile; **NIT**: No inhalation toxicity.

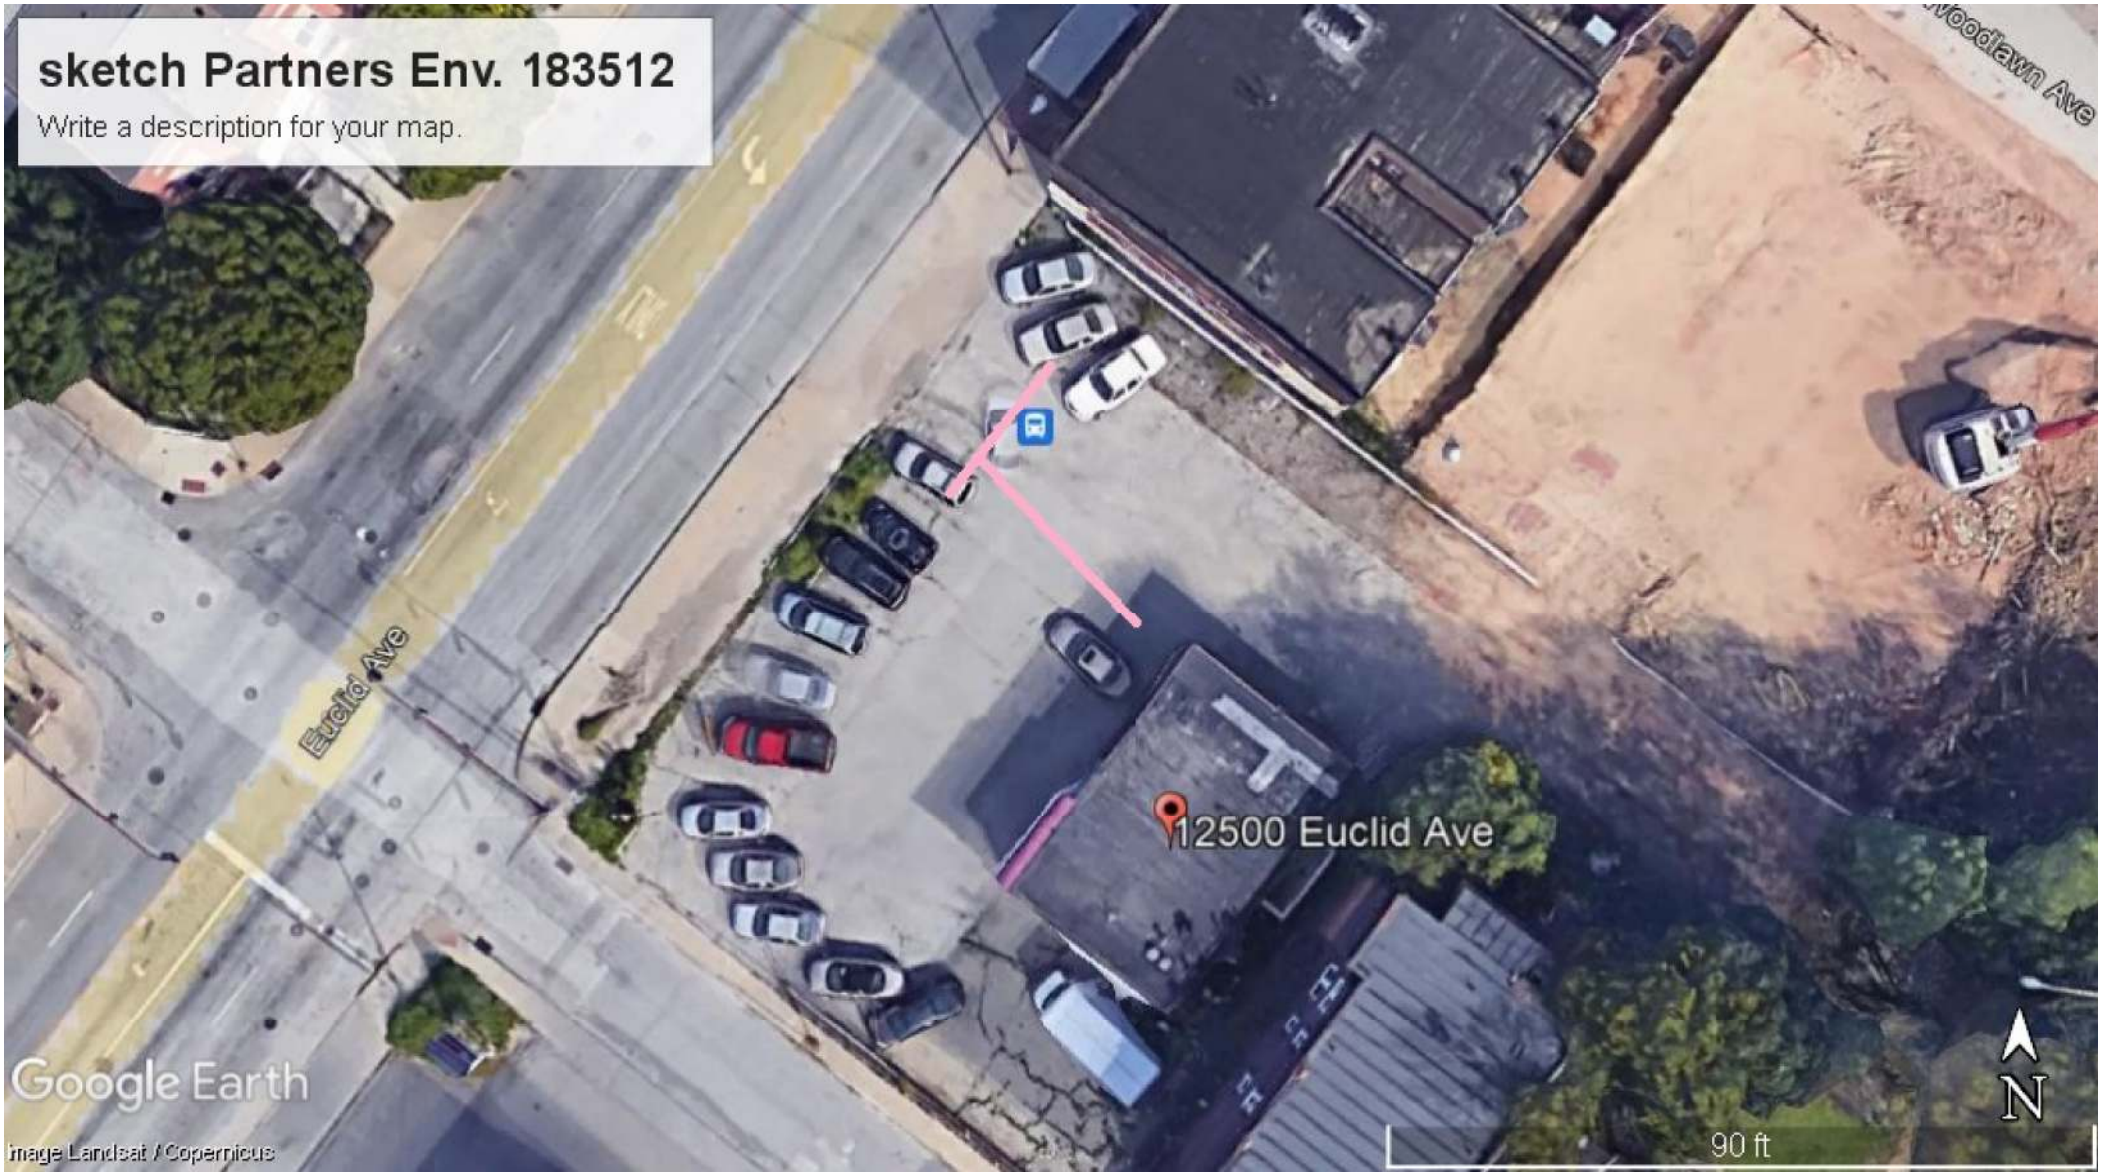

Bold numbers indicate a concentration above laboratory detection limits.

Bold and shaded numbers indicate a concentration above a comparison standard.

SOIL BOREHOLE / TEMPORARY WELL CONSTRUCTION LOG

MW-01

1 of 1

Client:	CCLRC-12500 Euclid Avenue	Location:	See site map
Date Drilled:	10/26/2021	Total Depth:	13 feet
Drilling Method:	Direct Push	Casing Elevation:	Not Applicable
Drilling Company:	EnviroCore	Top of Water:	NA (encounter) / 10.6 ft bgs (completion)
Driller:	Cody	Backfill Material:	Monitoring Well
Geologist:	Tom Weir		

Depth	Sample Type & Identification	SPT Blows Per 0.5 feet	Recovery (%)	PID/FID Readings	Profile	Geologic Description	USCS Soil Classification	Annular Materials	Profile	Well Materials
2.0	0-2'	NA	60%	1.5		ASPHALT (3") GRAVEL BASE (5")		Bentonite		1-inch PVC well riser
4.0	2-4'	NA	60%	0.7						
6.0	**4-6'**	**NA**	**70%**	**0.6**		Brown fine SAND with varying amounts of silt, moist, no odors or staining.	SP			
8.0	6-8'	NA	70%	1.0				Sand filter pack		
10.0	**8-10'**	**NA**	**80%**	**1.5**		Gray CLAY with black mottles, moist, no odors or staining. (8.2 to 8.8 feet)	CL			1-inch PVC well screen
12.0	10-12'	NA	80%	0.9		Brown fine to medium SAND with some gravel, moist to very moist, no odors or staining.	SP			
14.0						Direct Push sampling terminated at 12 feet bgs.				
16.0						1-inch diameter PVC well with a 5-foot screen set at a depth of approximately 13 feet bgs with expendable point tooling.				
18.0						Temporary well removed and borehole sealed with bentonite upon completion of groundwater sampling.				
20.0										
22.0										
24.0

ANALYTICAL REPORT

December 13, 2021

Revised Report

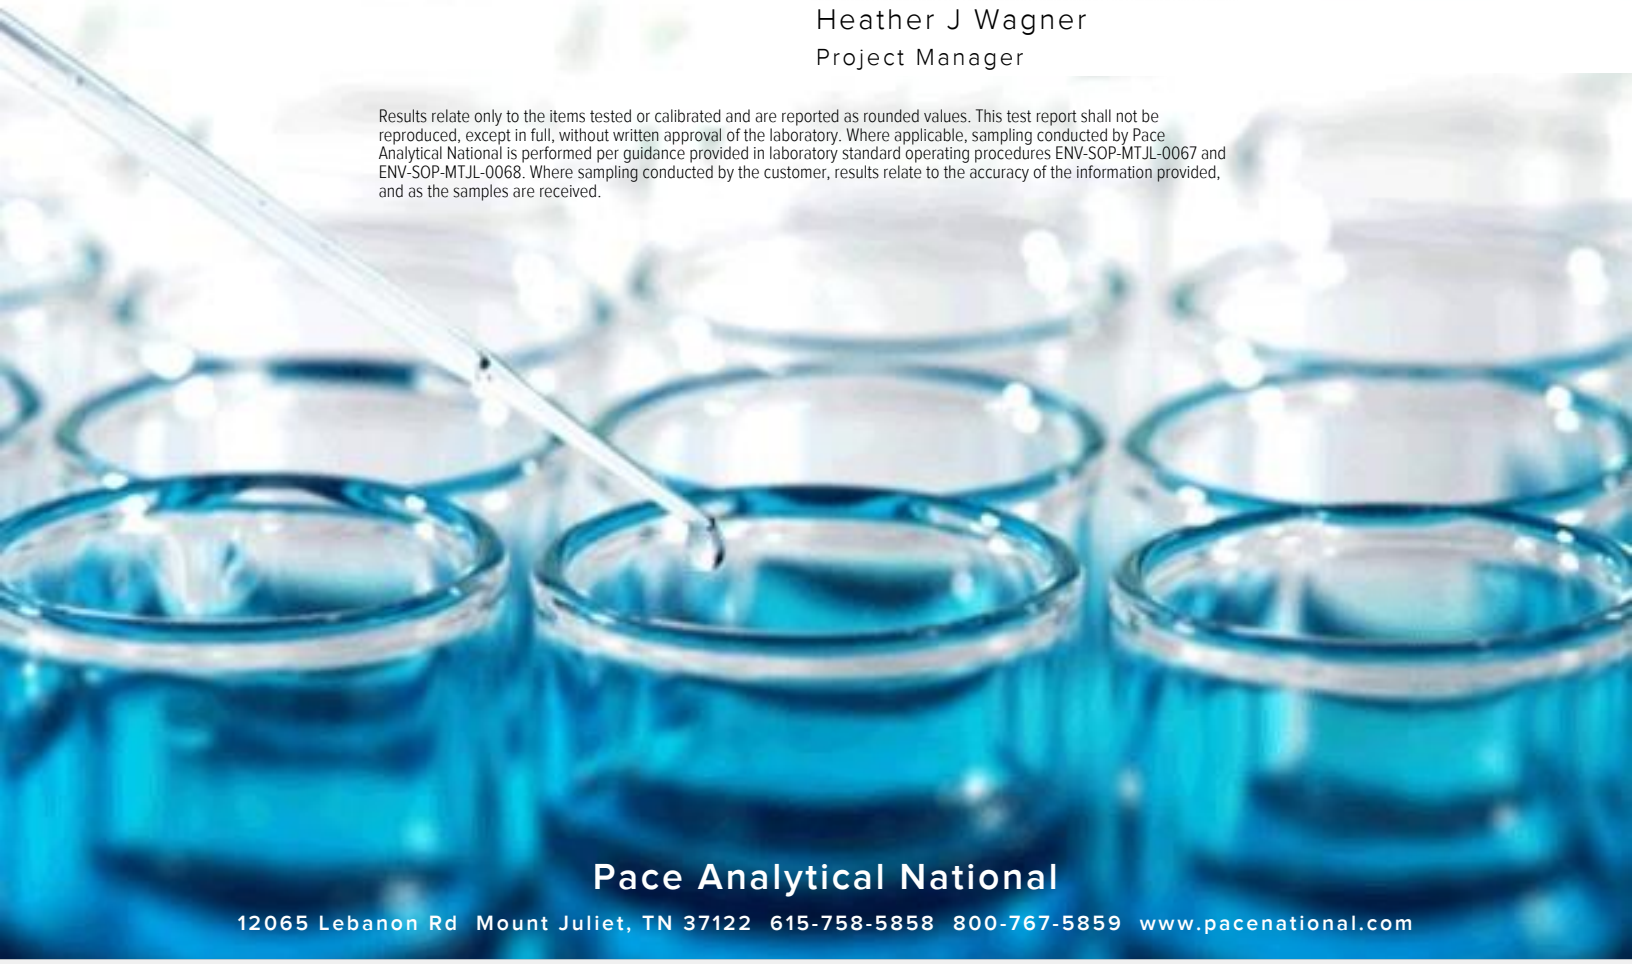

Partners Environmental Consulting

Sample Delivery Group:	L1424325
Samples Received:	10/29/2021
Project Number:	896.118
Description:	CCLRC-12500 Euclis Avenue
Report To:	Valerie Weir
	31100 Solon Road, Ste. G
	Solon, OH 44139

Entire Report Reviewed By:

Heather J Wagner
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Heather J Wagner
Project Manager

Report Revision History

Level II Report - Version 1: 11/11/21 10:22

Project Narrative

Revised Report: Revised to report the resuls from a re-analysis of samples SB-05 (8-10FT) DUPLICATE (L1424325-11) and SB-06 (0-2FT) (L1424325-12). The samples were re-analyzed to confirm sample ID and these samples were determined to have been switched during sample prep at the lab. This report replaces the report issued 11/11/2021.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
J	The identification of the analyte is acceptable; the reported value is an estimate.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J2	Surrogate recovery limits have been exceeded; values are outside lower control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J7	Surrogate recovery cannot be used for control limit evaluation due to dilution.
P	RPD between the primary and confirmatory analysis exceeded 40%.

GLOSSARY OF TERMS

Qualifier	Description
Q	Sample was prepared and/or analyzed past holding time as defined in the method. Concentrations should be considered minimum values.
V	The sample concentration is too high to evaluate accurate spike recoveries.

1.0 INTRODUCTION

Partners was contracted by the Cuyahoga County Land Reutilization Corp. (CCLRC, Client) to conduct a Limited Phase II Investigation (Phase II) at the Vacant Commercial Building located at 12524 Euclid Avenue in the City of East Cleveland, Cuyahoga County, Ohio (Property).

The Property is comprised of one (1) parcel, designated as Permanent Parcel Number (PPN) 672-13-010, which is owned by CCLRC. The Property consists of a rectangular shaped parcel measuring 0.17-acres located on Euclid Avenue at the south corner of the intersection of Euclid Avenue and Woodlawn Avenue. The Property is occupied by a vacant two (2) story brick building constructed in 1900.

The Property building has the following associated addresses from south to north: 12524, 12528, 12530, 12532, 12534, and 12538 Euclid Avenue.

2.0 PREVIOUS INVESTIGATIONS

Partners prepared a Phase I Environmental Site Assessment which included the Property parcel in January 2021. The Phase I identified the following recognized environmental condition (REC) on the Property:

> **Historical Dry-Cleaner and Commercial Printing Operations**: Commercial printing operations were present at 12534 Euclid Avenue in at least 1930 and 12530 Euclid Avenue in the 1970s. A dry cleaner was present at 12534 Euclid Avenue from at least 1935.

The following were noted for adjoining sites:

- Limited and Supplemental Phase II investigations were performed in 2019 for the parcel associated with 1810 Woodlawn Avenue which wraps around the Property to the south and east. Trichloroethene (TCE) was detected in the soil gas samples collected in the central portion of the former auto repair facility (4,270 micrograms per cubic meter [µg/m^3]) and near the Euclid Avenue right-of-way in the southern portion of that site (325 µg/m^3). The concentration of TCE in soil gas is above the Ohio Environmental Protection Agency's (EPA) standards for commercial use.

- From at least 1926 to 1963, the site to the south of the Property was used for auto sales, service, and painting. A gasoline UST was depicted on Sanborn Fire Insurance maps to the south of the Property at 12520 Euclid Avenue and within the Euclid Avenue right-of-way. In November 2019, Partners conducted exploratory excavation activities which determined that the UST remained and did not appear to have been abandoned in accordance with previous or current requirements. A gasoline filling station was present at 12500 Euclid Avenue.

Figure 4 shows the Property and adjacent parcels and associated addresses.

3.0 LIMITED PHASE II INVESTIGATION ACTIVITIES

The findings of the Phase I ESA were considered while preparing the Limited Phase II scope of work. It is Partners' understanding that the Property and the existing building will be renovated for residential use. Therefore, future receptor pathways at the Property may include residential receptors and construction/excavation workers.

3.1 General Scope

The Limited Phase II activities included soil, groundwater, and sub-slab vapor sampling and laboratory analysis. Partners advanced two (2) soil borings which were completed as groundwater monitoring wells (PMW-100 and PMW-101). Three (3) sub-slab vapor samples were obtained from within the building.

Prior to initiating field activities, Partners prepared a *Sampling and Analysis Plan* (SAP) dated December 8, 2021. The Limited Phase II Investigation was conducted in accordance with the SAP and the USEPA approved Quality Assurance Project Plan (QAPP) prepared by Partners.

Copyright © 2022, Partners

3.2 Methods of Assessment

3.2.1 Soil Boring, Sampling, Field Screening and Analysis

Soil borings were advanced using a truck-mounted, direct push technology (Geoprobe™) sampling system. The borings were sampled continuously from the ground surface to depths of approximately 14 feet below ground surface (bgs). The Geoprobe™ drives a two (2)-inch outside diameter (OD), stainless steel tube containing a new disposable acetate liner into the subsurface to obtain soil samples. The soil is forced into the liner at continuous four (4)-foot intervals and is then retrieved to the surface. Each four (4)-foot soil sample was further divided into two (2) foot sample intervals, visually observed, sampled, logged, and classified according to the Unified Soil Classification System (USCS) by a member of Partners' field staff. The boring locations are depicted on **Figure 2** and soil boring logs are included in **Appendix A**.

Soil samples were divided into two (2) portions. One (1) portion was placed in new two (2) or four (4)-ounce, pre-cleaned glass jars with Teflon® lined lids, and the second portion was placed in a new re-sealable plastic bag for field screening purposes. Soil samples for volatile organic compounds (VOC) analysis were collected in the field via Method 5035 using TerraCore™ style samplers and a 40 milliliter (ml) amber glass vial containing methanol (one [1] each). Samples placed in the glass jars were labeled and placed in a cooler containing ice, pending submission to an Ohio EPA Voluntary Action Program (VAP) certified laboratory for chemical analysis. New disposable nitrile gloves were worn and changed between each sample to prevent possible cross-contamination. The sampling equipment was decontaminated between sampling events with an Alconox® detergent rinse.

Soil samples were field screened for the presence of organic vapors using a MiniRAE 3000 Photoionization Detector (PID) manufactured by Honeywell RAE Systems. The PID was calibrated prior to field activities using a known concentration of a gas standard in accordance with the manufacturers' specifications. Soil sample PID readings are included on the soil boring logs in **Appendix A**.

Select soil samples were submitted for laboratory analysis based on a combination of historical information, field observations (visual or odor), PID screening results, the most likely depth of a release, and/or the potential point of compliance. Based on the conditions under assessment, selected soil samples were analyzed for the following parameters:

- Volatile Organic Compounds (VOCs) by USEPA Method 8260 (2 samples)
- Polynuclear Aromatic Hydrocarbons (PAHs) by USEPA Method 8270 (2 samples)

Soil samples were labeled, placed in an iced cooler, and submitted for analysis under appropriate chain-of-custody control to Pace Analytical, a VAP Certified Laboratory (CL0069), located in Mt. Juliet, Tennessee. The laboratory analytical report is included in **Appendix B**.

3.2.2 Groundwater Monitoring Well Installation, Sampling, and Analysis

The two (2) soil borings were completed as groundwater monitoring wells (PMW-100 and PMW-101). The monitoring wells were installed using a hollow stem auger (HSA) drill rig with 4¼-inch inside diameter (ID) augers to a depth of 15 feet bgs. The groundwater monitoring wells were constructed with two (2)-inch diameter polyvinyl chloride (PVC) riser pipe and 10 feet screen positioned to span the groundwater interface. The annular space was filled with sand to approximately two (2) feet above the screen slots and bentonite to the near surface. The monitoring wells were completed at the surface with flush mount protective casings set in a concrete pad. Wells were developed using surge and pump methods and allowed to recover a minimum of 24 hours prior to purging and sampling.

The groundwater monitoring wells were sampled using low-flow sampling methods. Low flow purging and sampling was accomplished using a pneumatically controlled bladder pump with the pump intake set in the approximate center of the submerged well screen interval to limit the disturbance of the sediments that may accumulate at the bottom of the well. A flow-through-cell water quality meter (such as the Horiba-U52) was used to measure the temperature, pH, specific conductivity, turbidity, oxygen-reduction potential (ORP) and dissolved oxygen of the water approximately every three (3) to five (5) minutes while purging. Once the

Copyright © 2022, Partners

measured parameters stabilized, groundwater samples were collected. Prior to purging, the static water level in each was measured using an interface probe to determine depth to groundwater and as a check for the presence of a light non-aqueous phase liquids (LNAPL) and dense non-aqueous phase liquids (DNAPL). Purge volumes and the color, odor, and turbidity of each well were noted on a Groundwater Sampling Log (**Appendix C**).

Groundwater samples were collected and submitted for laboratory analyses of the following parameters:

- VOCs by USEPA Method 8260 (2 samples)

Groundwater samples were labeled, placed in an iced cooler, and submitted for analysis under appropriate chain-of-custody control to Pace Analytical, a VAP Certified Laboratory (CL0069), located in Mt. Juliet, Tennessee. The laboratory analytical report is included in **Appendix B**.

3.2.3 Sub-Slab Sampling and Analysis

Three (3) temporary sub-slab vapor monitoring points (Vapor Pin™) were installed inside the existing building (SSV-01, SSV-02, and SSV-03). Sample Locations are depicted on **Figure 2.** The Vapor Pins™ were installed into a ⅝-inch diameter hole drilled through the slab and approximately three (3) inches into the underlying base material. Leak testing was conducted with a water dam. The water level was observed during the duration of the vapor sampling activities to confirm that the Vapor Pin™ was seated correctly. Teflon tubing was used to connect the vapor pin to a laboratory, certified clean, SUMMA® canister. The flow regulator on each SUMMA® canister was used to collect a sample directly from the sampling point over a one (1) hour period. In addition, one (1) sample of ambient air (BG-01) was obtained during the sampling event in an area believed to be unimpacted by the concerns being assessed to evaluate ambient conditions.

Samples were submitted for analysis under appropriate chain-of-custody control to Pace Analytical, for VOC analysis by USEPA Method 8260, Compendium TO-15.

3.2.4 Investigation Derived Waste

Soil cuttings from the borings/monitoring wells generated during the investigation were placed into two (2) 55-gallon drums that were properly labeled and temporarily stored on the Property pending waste characterization activities.

4.0 POTENTIALLY APPLICABLE COMPARISON STANDARDS

Although the Property is not going through the Ohio EPA VAP, the program has promulgated standards under state environmental law that establish levels that are considered protective of human health and the environment. These standards were used for evaluation of Property conditions. Partners understands that the planned land use of the Property is likely to be for residential purposes.

Evaluation of Soil

The VAP Generic Numerical Direct Contact Soil Standards (GDCS) for the Residential Land Use Category and the Construction/Excavation Activities Category (Ohio Administrative Code [OAC] 3745-300-08) were used for evaluation of the results of soil analyses. Constituents for which no GDCS have been derived were compared to the Ohio EPA VAP Chemical Information Database and Applicable Regulatory Standards (CIDARS), Supplemental Criteria.

Evaluation of Groundwater

Results of groundwater sampling was compared to the USEPA Vapor Intrusion Screening Levels (VISL) Target Groundwater Concentrations for residential land use with a carcinogenic risk of 1E-5, hazard quotient of 1, an attenuation factor (AF) of 0.001, and a groundwater temperature of 11 degrees Celsius in accordance with the Ohio EPA document *Sample Collection and Evaluation of Vapor Intrusion to Indoor Air for Remedial Response, RCRA and VAP.*

Copyright © 2022, Partners

As the Property is located within the Cleveland City-Wide Urban Setting Designation (USD), which establishes that groundwater is not and will not likely be used as a drinking water source, the Ohio VAP generic and risk-based Unrestricted Potable Use Standards (UPUS) are not applicable standards for the Property.

Evaluation of Sub-Slab Vapor

Results of sub-slab analyses were compared to the Ohio VAP generic indoor air standards due to vapor intrusion, residential land use category (OAC rule 3745-300-08). To evaluate sub-slab vapor, an attenuation factor is applied to the indoor air standard to account for the reduction in concentration during vapor migration in the subsurface coupled with the dilution that occurs when the vapors enter a building and mixes with indoor air. In accordance with Ohio EPA guidance and the *USEPA Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air, June 2015*, an attenuation factor of 0.03 was applied to the indoor air standards.

5.0 FINDINGS

5.1 Subsurface Conditions

The subsurface profile may be generalized as sporadic surficial fill followed by native deposits of sand and then shale. Soil boring logs are included in **Appendix B**.

Fill materials typically consisted of approximately up to 1.75-feet of silty/clayey sand with brick fragments. Native soils consist of fine to silty sand to depths of 13 feet bgs at which weathered shale bedrock was encountered. Groundwater encounter was apparent during drilling at depths ranging from 10 to 13 feet bgs. Static depth to groundwater were measured at depths of approximately 9 feet bgs.

6.0 RESULTS OF ANALYTICAL TESTING

The results of the analytical testing are presented in **Tables 1, 2 and 3**. The laboratory analytical reports are included in **Appendix B**.

6.1 Soil Analytical Results

VOCs: Results of analytical testing indicate that seven (7) VOC analytes were detected in the soil samples at concentrations above laboratory method detection limits (MDLs). All detected VOC concentrations were below the respective GDCS cited for comparison.

PAHs: Results of analytical testing indicate that 18 PAH analytes were detected in the soil samples at concentrations above laboratory MDLs. All detected PAH concentrations were below the respective GDCS cited for comparison.

6.2 Groundwater Analytical Results

VOCs: Results of analytical testing indicate that five (5) VOC analytes were detected in the groundwater samples at concentrations above laboratory MDLs. With the exception TCE, all detected VOC concentrations were below the VISL Target Groundwater Concentrations for residential land use.

The concentration of TCE in MW-100 (0.401 mg/l) exceeds the VISL standard of 0.01 mg/l. MW-100 is located near the southern Property corner in proximity to the known off-Property soil gas exceedance.

6.3 Sub-Slab Vapor Analytical Results

VOCs: Results of analytical testing indicate that 11 VOC analytes were detected in the sub-slab vapor samples at concentrations above laboratory MDLs. With the exception TCE, all detected VOC concentrations were below the Ohio VAP Generic Indoor Air Standards due to Vapor Intrusion (Residential Use Category) with the applied attenuation factor of 0.03.

The concentration of TCE in SSV-01 (675 ug/m^3) and SSV-01 Duplicate (1,220 ug/m^3) exceeds the applicable standard of 70 ug/m^3. SSV-01 is located in the southern portion of the building.

Copyright © 2022, Partners

7.0 LIMITATIONS

The analytical results and conclusions presented in this report are based on the completion of two (2) soil borings, two (2) monitoring wells, three (3) sub-slab vapor points and limited analytical testing. Although the results presented above provide a reasonable indication of conditions in the areas evaluated, they may not be indicative of conditions in areas of the Property not evaluated by Partners.

8.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the Limited Phase II Investigation activities and information contained in this report, Partners presents the following summary and conclusions regarding the Property.

Subsurface Profile

The subsurface profile may be generalized as silty sand soils overlying shale bedrock. Groundwater is present at a depth of about 9 feet bgs at the Property.

Soil Testing

Based on the results of analytical testing, soils have not been impacted by VOCs or PAHs at concentrations exceeding the GDCS for the Residential Land Use or Construction/Excavation Activities.

Groundwater Testing

Based on the results of analytical testing, the concentration of TCE in the groundwater at MW-100 exceeds the respective VISL value for residential use. MW-100 is located at the southern Property corner near the known off-Property soil gas and groundwater exceedances.

Sub-Slab Vapor Testing

Based on the results of analytical testing, the concentrations of TCE in the sub-slab vapor at SSV-01, in the southern portion of the building, exceeds applicable standards for residential use.

Recommendations

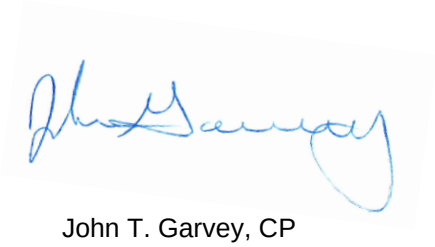

The presence of TCE in the groundwater and sub-slab vapor on the Property represents a vapor intrusion risk to potential on-Property residential receptors. Depending on future development plans for the Property, mitigation of the vapor intrusion risk may be necessary through the installation of a vapor barrier or sub-slab depressurization system.

9.0 CLOSING

Thank you for the opportunity to serve your needs. Please call us at (800) 763-1363 if you have any questions or if we can be of any further assistance.

Sincerely,
Partners

Notes

mg/l = Milligrams per liter - parts per million (ppm).

USEPA VISL Target Groundwater Concentration for Commercial Use.

NE: No standard established by Ohio EPA; **NSV**: Not sufficiently volatile; **NIT**: No inhalation toxicity.

Bold numbers indicate a concentration above laboratory detection limits.

Bold and shaded numbers indicate a concentration above a comparison standard.

ANALYTICAL REPORT

December 28, 2021

Partners Environmental Consulting

Sample Delivery Group:	L1441693
Samples Received:	12/14/2021
Project Number:	896.119
Description:	CCLRC-12524 Evclid Avenue

Report To: Valerie Weir
31100 Solon Road, Ste. G
Solon, OH 44139

Entire Report Reviewed By:

Heather J Wagner
Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J5	The sample matrix interfered with the ability to make any accurate determination; spike value is high.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.
J+	The associated batch QC was outside the upper control limits; associated data has a potential positive bias.
V	The sample concentration is too high to evaluate accurate spike recoveries.

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J+	The associated batch QC was outside the upper control limits; associated data has a potential positive bias.

Project Manager

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by Pace Analytical National is performed per guidance provided in laboratory standard operating procedures ENV-SOP-MTJL-0067 and ENV-SOP-MTJL-0068. Where sampling conducted by the customer, results relate to the accuracy of the information provided, and as the samples are received.

CASE NARRATIVE

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Results Disclaimer - Information that may be provided by the customer, and contained within this report, include Permit Limits, Project Name, Sample ID, Sample Matrix, Sample Preservation, Field Blanks, Field Spikes, Field Duplicates, On-Site Data, Sampling Collection Dates/Times, and Sampling Location. Results relate to the accuracy of this information provided, and as the samples are received.

Abbreviations and Definitions

MDL	Method Detection Limit.
ND	Not detected at the Reporting Limit (or MDL where applicable).
RDL	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, the sample preparation volume or weight values differ from the standard, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Uncertainty (Radiochemistry)	Confidence level of 2 sigma.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
	The remainder of this page intentionally left blank, there are no qualifiers applied to this SDG.

1.0 INTRODUCTION

Partners was contracted by University Circle, Inc. (Client) to conduct a Supplemental Limited Phase II Investigation (Phase II) at the Mickeys Parcels Site located at 12550 Euclid Avenue and contiguous parcels (12520-12558 Euclid Avenue, 1819-1826 Woodlawn Avenue and 1810 Woodlawn Avenue) in the City of East Cleveland, Cuyahoga County, Ohio (Property). The Property is located on the east side of Euclid Avenue, between Lakeview Road and Penrose Avenue and bisected by Woodlawn Avenue. The location of the Property is depicted on the East Cleveland, Ohio Quadrangle, United States Geological Survey (USGS) 7.5-Minute Topographic Map (**Figure 1**).

The Property is comprised of seven (7) parcels, designated Permanent Parcel Numbers (PPNs) 672-14-001, 672-14-002, 672-14-003, 672-14-146, 672-14-147, 672-14-148, and 672-13-001, which are currently owned by Lincoln Property Management, LLC.

The surface topography of the Property is gently sloping northwest towards Lake Erie. Therefore, the Phase II scope of work (SOW) was developed with the presumption that the inferred direction of groundwater flow at the Property was to the northwest.

2.0 PREVIOUS INVESTIGATIONS

Partners completed a DRAFT Phase I Environmental Site Assessment (ESA) for the Property titled *Mickeys Parcels Site, 12550-12558 Euclid Avenue, 1819-1826 Woodlawn Avenue & 1810 Woodlawn Avenue, East Cleveland, Cuyahoga County, Ohio*, for the Client, dated May 23, 2019.

Partners' Phase I ESA identified the following recognized environmental conditions (RECs) in connection with the Property.

On-Property

- **Automotive Body and Mechanic Repair & Associated Hydraulic Lifts, 12550 Euclid Avenue:** By 1949, the northern portion of the Property, east of Woodlawn Avenue, was redeveloped with the existing auto repair garage and office building. The building was occupied by Economy Buick from at least 1949 to 1967 and was occupied by Mickeys Enterprises from at least 1973 to 2002. Operations during that time included auto repair and auto body work, rust proofing of cars, and automotive painting. In 1985, releases of kerosene to the municipal sanitary sewer were identified at this facility by the Northeast Ohio Regional Sewer District (NEORSD). Petroleum products and hazardous substances were typically utilized during daily auto repair activities, including parts cleaning, coating, lubricating, etc. Releases (if any) of hazardous substances and/or petroleum products during daily operations have the potential to have adversely impacted the Property.

  In 2001, four (4) hydraulic lifts were removed from within the building by Venture Environmental Contracting LLC (VEC). Soil samples collected from beneath two (2) lifts detected concentrations of total petroleum hydrocarbons (TPH) above the saturation limit. Additionally, the potential exists that the hydraulic oil contained polychlorinated biphenyls (PCBs). There are no known soil removal activities or PCB sampling conducted in the northern portion of the Property.

- **Auto Repair Operations, Associated Hydraulic Lifts & Historical Underground Storage Tank (UST), 1810 Woodlawn Avenue:** Prior to 1913, the southern portion of the Property, west of Woodlawn Avenue, was developed with a garage for auto repair operations, which included an oil storage room. Since 1913, the building had been occupied by several auto repair companies. Hazardous substances and/or petroleum products were typically utilized during daily auto repair activities, including parts cleaning, coating, lubricating, and etc. Releases (if any) of hazardous substances and/or petroleum products during daily operations have the potential to have adversely impacted the Property.

  In 2001, three (3) hydraulic lifts were removed from the southern portion of the Property by VEC. TPH was detected above the saturation limit in soil samples collected from Lifts 6 and 9; however, due to visual contamination, the soil from Lifts 8 and 9 were removed from the Property. The soil from Lift 6 was placed back in the excavation cavity. Therefore, petroleum contaminated

Copyright © 2019, Partners

soil (PCS) remains at the southern portion of the Property. The soil samples were not analyzed for PCBs.

In the 1913 Sanborn map, a 200-gallon gasoline underground storage tank (UST) was at the rear of the southern portion of the Property. The gasoline UST is not depicted in the 1926 Sanborn map. Regulatory records reviewed indicate that the UST has not been removed. The potential exists that releases from this UST (if any) have adversely impacted the Property.

- **Automotive Paint Shop & Historical UST, 12520 Euclid Avenue:** The southern portion of the Property, along the southern Property boundary, is identified as an automotive paint shop from at least 1962 to 1967. Automotive paint operations typically utilize substances and/or petroleum products as cleaning solvents. Solvent based paints may have also been stored and applied. Releases (if any) of these hazardous substances and/or petroleum products during daily operations have the potential to have adversely impacted the Property.

  Sanborn maps indicate that a gasoline UST was present adjoining the southern portion of the Property, within the Euclid Avenue right-of-way, from at least 1926 to 1963. Records reviewed (e.g., East Cleveland Fire Department [ECFD] and the Bureau of Underground Storage Tank Regulations [BUSTR]) do not indicate that this UST was removed. Additionally, the potential exists that this UST was mapped incorrectly, similarly to the UST identified within the Woodlawn right-of-way, which was determined to be on the Property, beneath the former building. Releases (if any) from this gasoline UST have the potential to have adversely impacted the Property.

- **Dry Cleaning Operations, 12558 Euclid Avenue:** A former commercial storefront in the northern portion of the Property was occupied by Miggies Dry Cleaning in at least 1949, Do-Well Cleaners from at least 1954 to 1959 and by Unique Dry Cleaners from at least 1962 to 1967. Dry cleaning operations typically use hazardous substances or petroleum products as cleaning solvents (e.g. perchloroethylene or Stoddard Solvent); therefore, releases (if any) from this facility may have adversely impacted the Property.

- **Silk Screen Printing Operations, 12562 Euclid Avenue:** The Property is identified in the city directories from 1967 to 1972 as Hugh Kenneth M Silk Screen Process. Silk screen printing operations often use solvent based and heavy metal containing inks. Equipment cleaning processes may have included chlorinated and/or petroleum-based solvents and resulted in the generation of contaminated industrial wastewater. Releases (if any) of solvent based inks and solvents used in the cleaning processes have the potential to have adversely impacted the Property.

Off-Property

- **Former Filling Station/Auto Repair Operations, 12500 Euclid Avenue:** Between 1962 and 1970, the southwest adjoining site, on the east of Woodlawn Avenue, was redeveloped with a filling station. Records obtained from the Fire Department that a 6,000-gallon gasoline UST, a 3,000-gallon gasoline UST, and a 1,000-gallon oil UST were formerly located adjacent to the southern Property boundary. Filling station operations ceased, and the USTs were removed in 1973. The facility is identified as ALS A-1 Automatic Transmission Service from 1974 to 1980. Releases (if any) of hazardous substances and/or petroleum products from the former USTs, during daily filling station, and auto repair operations have the potential to have adversely impacted the Property.

In July 2019, Partners was contracted by the Client to conduct a Limited Phase II Investigation to determine the impact to the Property from the Recognized Environmental Conditions (RECs) identified in the Phase I ESA. During the initial Phase II Investigation, Partners advanced 11 soil borings (SB-01 through SB-08 and MW-01 through MW-03), and installed three (3) groundwater monitoring wells (MW-01 through MW-03), one (1) soil vapor point (SV-02), and one (1) sub-slab vapor point (SV-01). In addition to the above, a ground penetrating radar survey was conducted on the southern half of the Property (all land south of Woodlawn Avenue). The findings and conclusions of the initial investigation are included in a report titled *DRAFT Limited Phase II Investigation, Mickey's Parcels Site, 12550 Euclid Avenue, East Cleveland, Cuyahoga County, Ohio*, for the Client, dated August 15, 2019 (Project Number 326.03A).

Copyright © 2019, Partners

Partners identified elevated concentrations of trichloroethylene (TCE), primarily in soil and soil vapor at SB-02 and SV-02 respectively, on the southern portion of the Property. The primary concern associated with the findings is the potential for the TCE release at the Property to migrate offsite to the northwest (the direction of groundwater flow measured during the initial Phase II Investigation).

In addition, an anomaly was identified through the GPR survey on the southern portion of the Property, near Euclid Avenue in the vicinity of a previously mapped UST. It was unknown at that time if the anomaly was representative of a UST.

3.0 SUPPLEMENTAL LIMITED PHASE II INVESTIGATION ACTIVITIES

The previous Phase I ESA and Phase II Investigation findings were considered while preparing the Supplemental Phase II scope of work. It is Partners' understanding that the future receptor pathways at the Property are likely to include adult commercial-industrial workers and/or construction workers, including utility workers, that may come in direct contact with potentially impacted soil-gas or groundwater at the Property.

Based on the findings of the initial investigation, supplemental Phase II activities were conducted in October-November 2019 to further assess conditions at the Property.

3.1 General Scope

The Supplemental Phase II activities included soil, groundwater, and sub-slab vapor/soil gas sampling and laboratory analysis. The goal of this Phase II was to conduct an assessment sufficient to determine the extent of TCE impacts at the Property, if TCE has the potential to impact off-Property receptors, and if a UST is present at the Property.

On October 31, 2019, Partners advanced eight (8) soil borings (SB-09 through SB-14, MW-04 and MW-05), and installed two (2) groundwater monitoring wells (MW-04 and MW-05), two (2) soil gas monitoring points (SV-03 and SV-04), and one (1) sub-slab vapor point (SV-05). In addition, one (1) exploratory test pit was excavated in the area of the suspected UST/GPR anomaly near Euclid Avenue.

- Soil borings SB-09 through SB-14, MW-04 and MW-05, and soil gas monitoring point SV-04 were installed in the vicinity of SB-02 and SV-02 to further assess the TCE impacts at the former garage/auto repair (1810 Woodlawn Avenue).
- Sub-slab vapor point SV-05 was installed within the building to further assess historic auto repair activities (12550 Euclid Avenue).
- Soil gas monitoring point SV-03 was installed in the area of the UST at the former automotive body repair and paint shop (12520 Euclid Avenue).

Soil boring, groundwater monitoring well, soil gas monitoring point, and sub-slab vapor sample locations are shown on **Figure 2**.

3.2 Methods of Assessment

3.2.1 Soil Sampling, Field Screening and Analyses

Soil borings were advanced using a track-mounted, direct push technology (Geoprobe™) sampling system. The borings were sampled continuously from the ground surface to depths ranging from 10 to 16 feet below ground surface (bgs). The Geoprobe™ drives a two (2)-inch outside diameter (OD), stainless steel tube containing a new disposable acetate liner into the subsurface to obtain soil samples. The soil is forced into the liner at continuous four (4)-foot intervals and is then retrieved to the surface. Each four (4)-foot soil sample was further divided into two (2) foot sample intervals, visually observed, sampled, logged, and classified according to the Unified Soil Classification System (USCS) by a member of Partners' field staff.

The boring locations are depicted on **Figure 2** and soil boring logs are included in **Appendix A**.

Soil samples were divided into two (2) portions. One (1) portion was placed in new two (2) or four (4)-ounce, pre-cleaned glass jars with Teflon® lined lids, and the second portion was placed in a new re-

Copyright © 2019, Partners

sealable plastic bag for field screening purposes. Samples placed in the glass jars were labeled and placed in a cooler containing ice, pending submission to an Ohio Environmental Protection Agency (Ohio EPA) Voluntary Action Program (VAP) certified laboratory for chemical analysis. New disposable nitrile gloves were worn and changed between each sample to prevent possible cross-contamination. The sampling equipment was decontaminated between sampling events with an Alconox® detergent rinse.

Soil samples were field screened, using a MiniRAE 3000 Photoionization Detector (PID) manufactured by RAE Systems, for the presence of organic vapors. The PID was calibrated prior to field activities using a known concentration of a gas standard in accordance with the manufacturers' specifications. Soil sample PID readings are included on the soil boring logs in **Appendix A**.

Soil borings were properly abandoned at the completion of field activities by filling each to immediately below grade with hydrated bentonite chips. The soil borings were finished at the surface with like surfacing materials (e.g., soil or concrete).

Select soil samples were submitted for laboratory analysis based on a combination of historical information, field observations (visual or odor), PID screening results, depth to water, the most likely depth of a release, and/or the potential point of compliance. Based on the conditions under assessment, selected soil samples were analyzed for the following parameters:

- Volatile Organic Compounds (VOCs) by the United States Environmental Protection Agency (USEPA) Method 8260 (16 samples; two (2) per each boring),

Soil samples were submitted for analysis under appropriate chain-of-custody control to Pace Analytical, a VAP Certified Laboratory (CL0069), located in Mt. Juliet, Tennessee. The laboratory analytical report is included in **Appendix B**.

3.2.2 Groundwater Monitoring Well Construction, Development, Sampling and Analysis

Two (2) soil borings (MW-04 and MW-05) were converted to permanent groundwater monitoring wells. The monitoring wells were advanced using four and one-quarter (4¼)-inch inside diameter (ID) hollow-stem augurs (HSAs) to depths of about 16 to 17 feet bgs.

The groundwater monitoring wells were constructed with two (2)-inch diameter polyvinyl chloride (PVC) well screen (0.010-inch slot) and riser pipe. The screened section of the wells ranged from eight (8) to 10 feet long and were positioned to span the groundwater interface. The annular spaces were filled with sand to approximately two (2) feet above the top of screens and then with bentonite to within one (1) foot of the ground surface. The monitoring wells were completed at the ground surface with flush-mount steel protective casings set in concrete pads. The monitoring well construction diagrams are included in **Appendix A**.

Prior to developing each monitoring well, the depth to water was measured to the nearest 0.01 feet using a water level indicator. The monitoring wells were developed on October 31, 2019 using a Whaler pump and surging techniques to ensure good communication with the surrounding aquifer. During development activities, monitoring wells MW-04 and MW-05 were purged of approximately six (6) to eight (8) gallons of water (approximately 5-8 well volumes) until the wells went dry. The purged groundwater somewhat visually cleared up during development, but fines were still observed.

On November 1, 2019 and prior to sampling each groundwater monitoring well, the depth to groundwater was measured to the nearest 0.01 feet using a product-water interface probe (IP) to check for non-aqueous phase liquids (NAPL) at the top and bottom of the water column in the well. After gauging was completed, a QED SamplePro portable micropurge bladder pump, QED Micropurge Basics controller with a compressed gas cylinder, and disposable polyethylene bladder/tubing were used to purge and obtain a groundwater sample using low flow sampling techniques. Based on the measured depth to groundwater, the pump intake was placed at the approximate midpoint of the screened interval. The bladder pump was lowered slowly into the well to avoid disturbing accumulated sediments. The pump was started at its lowest setting and the pumping rate was slowly increased until discharge was observed at the flow-through cell. The pump speed was adjusted to minimize and stabilize the drawdown of the groundwater in the well. Based on aquifer characteristics and monitoring well diameter, a flow rate of 200 milliliters (ml) per minute was utilized.

Copyright © 2019, Partners

A Horiba U-52 Water Quality Monitoring System with a flow-through cell was used by Partners to monitor groundwater quality. During purging, the groundwater was monitored for temperature, pH, specific conductivity, turbidity, dissolved oxygen (DO), oxidation-reduction potential (ORP), and depth to top of groundwater. The pump setting, purge rate, cumulative volume purged, and field parameters were recorded at approximate one (1) liter volume intervals during purging. The well was pumped until approximately three (3) well volumes of water were purged, water rebounded after the well was purged dry, or if the water quality readings were stable and the purge water had low turbidity readings. Well purging and sampling field data sheets are presented in **Appendix C**.

The groundwater samples were placed in two (2) 40-ml volatile organic analysis (VOA) amber vials containing hydrochloric acid as a preservative. Sample containers and preservatives were provided by the laboratory. Samples were collected, labeled, and placed in a cooler containing ice, stored at approximately 4°C, and submitted under appropriate chain-of-custody control to Pace Analytical. The groundwater samples were analyzed for VOCs by USEPA Method 8260. The laboratory report is included in **Appendix B**.

3.2.3 Determination of Groundwater Flow Direction

During the July 2019 assessment activities, Partners measured monitoring well top of casing (TOC) elevations relative to the top of the fire hydrant located adjacent to the northern Property boundary, on the south side of the intersection of Euclid Avenue and Penrose Avenue. Depth to groundwater was measured from the surveyed top of well casing reference point at each monitoring well using a water level indicator and/or interface probe. The information was used to determine the groundwater flow direction for reporting purposes (**Figure 3**), and to prepare a groundwater contour map.

3.2.4 Sub-Slab Vapor and Soil Gas Sampling Point Construction, Sampling and Analysis

Partners installed one (1) temporary sub-slab vapor monitoring point (SV-05) within the former auto repair building in the northern portion of the Property (12550 Euclid Avenue). The sub-slab vapor monitoring point was installed in accordance with the Ohio EPA VAP Intrusion Guidance titled *Sample Collection and Evaluation of Vapor Intrusion to Indoor Air, Guidance for Ohio EPA's Remedial Response and Voluntary Action Programs (2010)* and with the *US EPA's OSWER Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air (June 2015).*

The Vapor Pin™ monitoring point was set in a 5/8-inch diameter hole drilled through the concrete floor slab and approximately three (3) inches into the underlying base material. Loose drill cuttings were removed with a vacuum. The lower end of the Vapor Pin™ assembly was placed into the drilled hole. The protection handle was placed over the Vapor Pin™ to protect the barb fitting and cap, and the Vapor Pin™ was tapped into place using a hammer. Leak testing was conducted by constructing a water dam from food grade modeling clay on the concrete slab around the Vapor Pin™. The water dam was then filled with water to confirm that the Vapor Pin™ was seated correctly.

Partners installed two (2) soil gas monitoring points (SV-03 and SV-04) in the southwestern and central portions of the vacant lot in the southern portion of the Property. A Geoprobe™ drill rig utilized a four and one-quarter (4¼)-inch ID HSA to install the soil gas monitoring points to a depth of five (5) feet bgs (approximately 1-foot into the underlying shale bedrock). Each soil gas sampling point was constructed with a six (6)-inch screen made of double woven stainless steel and Teflon tubing to the surface. An approximately one (1)-foot sand pack was placed around the woven screen, and the remainder of the annular space was filled with hydrated bentonite to seal the implant. The monitoring points were finished with a flush mount protective cover.

Teflon tubing was used to connect the monitoring points to laboratory-certified, clean, six (6) liter SUMMA® canisters equipped with one (1) hour flow regulators to collect a sample directly from the sampling points. The sub-slab vapor and soil gas samples were collected over an approximate one (1) hour period, as noted in the Soil Gas/Sub-Slab Sampling Forms included in **Appendix C**.

In addition, a background ambient air sample (SV-06) was obtained from the central area of the vacant lot during the sub-slab vapor/soil-gas sampling event.

Copyright © 2019, Partners

Sub-slab vapor, soil gas, and ambient air samples were submitted for analysis of VOCs in accordance with USEPA Method TO-15. The laboratory analytical report is included in **Appendix B**.

3.2.5 Investigative Derived Waste

All investigative derived waste (IDW) (i.e., field screened soil, excess soil cuttings, development and purge water, decontamination water, etc.) generated during field activities was containerized in four (4) Department of Transportation (DOT)-approved 55-gallon drums. Three (3) of the drums contain soil and one (1) drum contains water. The drums were properly labeled and temporarily staged in the southern portion of the Property. The wastes will be characterized for proper disposal based on the data collected during this investigation.

3.2.6 Exploratory Excavation

On November 1, 2019, Partners utilized an excavator to explore the anomalous area identified near MW-01 on the southern portion of the Property near Euclid Avenue. The anticipated area of excavation was approximately 10 feet long on each side and six (6) feet deep. Once excavation activities were completed, the overburden was returned to the excavation and compacted using the excavator. The surface was made flush to match the existing grade; however, some settling should be anticipated and resurfacing the area with asphalt is beyond this scope. Monitoring well MW-1 and the newly installed soil gas sampling point (SV-03) were destroyed during the excavation activities

4.0 POTENTIALLY APPLICABLE COMPARISON STANDARDS

Although the Property is not enrolled in the Ohio EPA Voluntary Action Program (VAP), the program has promulgated standards under state environmental law that establish levels that are considered protective of human health and the environment. These standards were used for evaluation of Property conditions. Partners understands that the current and planned land use of the Property is commercial/industrial.

Evaluation of Soil

The VAP Generic Numerical Direct Contact Soil Standards (GDCS) for the Commercial/Industrial Land Use Category and the Construction/Excavation Activities Category (Ohio Administrative Code [OAC] 3745-300-08, Appendix, Tables II and III) were used for evaluation of the results of soil analyses. Constituents for which no GDCS have been derived were compared to the Ohio EPA VAP Chemical Information Database and Applicable Regulatory Standards (CIDARS), Supplemental Criteria.

TPH concentrations in soil were evaluated using the TPH Saturation Concentration, coarse grained soils (OAC 3745-300-09(D)(2)(b)).

Evaluation of Groundwater

The Property is located within the City of East Cleveland Urban Setting Designation (USD). USDs are geographic areas in which it has been established that groundwater is not and will not be used as a drinking water source. Therefore, the Unrestricted Potable Use Standards are not the applicable standard for the Property.

To evaluate the potential for COCs in groundwater to pose a risk through vapor intrusion, results of analyses were compared to the USEPA Vapor Intrusion Screening Levels (VISL) Target Groundwater Concentrations for Commercial Use. The VISL calculator was set to a carcinogenic risk of 1E-5, hazard quotient of 1, an attenuation factor (AF) of 0.001, and a groundwater temperature of 11 degrees Celsius in accordance Ohio VAP Risk Goals and the *USEPA Technical Guide for Assessing and Mitigating the Vapor Intrusion Pathway from Subsurface Vapor Sources to Indoor Air*, June 2015. Additionally, the detected COCs in groundwater were evaluated for vapor migration concerns using the Ohio EPA *Response Action Levels for COCs at Vapor Intrusion Sites in Ohio* (Ohio EPA, 2016).

Evaluation of Sub-Slab Vapor and Soil Gas

Results of sub-slab vapor and soil gas analyses were compared to the Ohio VAP Generic Indoor Air Standards due to Vapor Intrusion, Commercial/Industrial Land Use category (OAC rule 3745-300-08, Appendix Table V). To evaluate sub-slab vapor/soil gas results, an attenuation factor is applied to the indoor air standard to account for the reduction in concentration during vapor migration in the subsurface

Copyright © 2019, Partners

coupled with the dilution that occurs when the vapors enter a building and mix with indoor air. In accordance with Ohio EPA guidance and USEPA Guidance (June 2015), an attenuation factor of 0.03 was applied to the Indoor Air Standards.

Where applicable, the comparison standard was obtained from the Ohio EPA document titled *Response Action Levels for COCs at Vapor Intrusion Sites in Ohio* (Ohio EPA, 2016).

5.0 FINDINGS

5.1 Subsurface Conditions

The subsurface profile may be generalized as discontinuous areas of fill followed by primarily granular soils underlain by shale bedrock. Soil boring logs are included in **Appendix A**.

Fill materials typically consisted of brown fine sand with varying amounts of brick, concrete and/or asphalt fragments up to depths of about 4.5 feet. Fill was encountered at borings SB-11, SB-13, SB-14 and MW-04.

Native soils generally consisted of brown fine sand with interbedded layers of silty-clayey sand and/or clayey silt with varying amounts of gravel extending to depths up to 15.5 feet bgs.

Weathered shale bedrock was encountered in all borings at depths ranging from about six (6) to 15.5 feet bgs.

Petroleum odors and/or staining were noted in the soil at MW-04 (14-16 feet) and MW-05 (0-2 feet; 8-12.5 feet) bgs. PID readings generally ranged from less than one (1) parts per million (ppm) to 20.4 ppm.

With the exception of SB-13, groundwater was encountered during drilling at depths ranging from eight (8) to 10.5 feet bgs. Groundwater was not encountered during drilling at SB-13 due to shallow bedrock (6 feet bgs). The static groundwater levels measured in the new monitoring wells (MW-04 and MW-05) ranged from 10 feet bgs at MW-05 to 12 feet bgs at MW-04. No NAPL were measured in the wells. Based on the previous investigation, relative groundwater elevations ranged from 85.89 feet (MW-3) to 96.17 feet (MW-2). Based on these measurements, the general direction of groundwater flow is to the northwest. Groundwater elevation contours as determined in July 2019 are depicted on **Figure 3**.

5.2 Exploratory Excavation

The exploratory excavation uncovered one (1) steel UST approximately three (3)-feet in diameter and 10-feet long. The tank is estimated to be approximately 800-1,000 gallons in capacity. No liquids or sand fill material were observed in the tank. The soil on the top and sides of the tank primarily consisted of brown fine sand. No petroleum staining or odors were observed in the excavation or the material removed. The location of this tank coincides with the anomaly identified in the GPR survey conducted in July 2019. Field observations indicate the tank was not properly abandoned in-place.

6.0 RESULTS OF ANALYTICAL TESTING

6.1 Soil Analytical Results

The results of the soil analytical testing are presented in **Table 1** and depicted on **Figure 4**. The laboratory analytical reports are included in **Appendix B**.

VOCs: All soil samples collected during this phase of assessment were submitted for VOC analysis. Results of analytical testing indicate that 22 VOC analytes were detected in the soil samples at concentrations above laboratory method detection limits (MDLs). All detected VOC concentrations were below the respective GDCS for the Commercial/Industrial Land Use Category and the Construction/Excavation Activities Category.

The VOC analytical results are summarized in **Table 1**.

6.2 Groundwater Analytical Results

The results of the groundwater analytical testing are presented in **Table 2** and depicted on **Figure 5**. The laboratory analytical report is included in **Appendix C**.

Copyright © 2019, Partners

VOCs: Groundwater analytical testing indicated that seven VOC analytes were present in groundwater samples at concentrations above the laboratory MDLs. With the exception of trichloroethene (TCE), the detected VOC analyte concentrations were several orders of magnitude below their respective VISL Target Groundwater Concentration for Commercial Use.

TCE was detected at MW-04 at a concentration of 0.01 milligrams per liter (mg/L), which is below the VISL Target Groundwater Concentration for Commercial Use and the Ohio EPA Accelerated Response Action Level for a Commercial Exposure Scenario (0.044 mg/L).

6.3 Sub-Slab Vapor, Soil Gas, and Ambient Air Analytical Results

The results of the sub-slab vapor, soil gas, and ambient air testing are presented on **Table 3** and depicted on **Figure 6.** The laboratory report is included in **Appendix B**. Sub-slab vapor, soil gas, and ambient air samples collected were analyzed for VOCs. All laboratory RDLs are below the cited comparison standards. VOC analytes detected in the background gas sample (SV-06) did not indicate that outdoor air would influence sub-slab vapor and soil gas samples collected.

Sub-Slab Vapor

Analytical results indicate that 15 VOC analytes were present in the sub-slab vapor sample (SV-05) collected from the beneath the building in the northern portion of the Property. Detected VOC analytes were below their respective VAP comparison standards with the applied attenuation factor.

Soil Gas

Analytical results indicate that 19 VOC analytes were present in the soil gas samples (SV-03 and SV-04) collected from the southwestern and central portions of the vacant lot in the southern portion of the Property. With the exception of TCE, the detected VOC analytes were below their respective VAP comparison standards with the applied attenuation factor.

At SV-03, TCE was present at a concentration of 325 µg/m^3, which is above the cited Ohio EPA standards for TCE in a commercial scenario (290 µg/m^3).

7.0 LIMITATIONS

The analytical results and conclusions presented in this supplemental report are based on results from the current installation of eight (8) soil borings, two (2) groundwater monitoring wells, one (1) sub-slab vapor sample point, and two (2) soil gas sample points; and limited soil, groundwater, and soil-gas/sub-slab vapor sample analyses. Although the results presented above provide a reasonable indication of conditions in the areas evaluated, they may not be indicative of conditions in areas of the Property not evaluated by Partners.

8.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the Supplemental Limited Phase II Investigation activities and information contained in this report, Partners presents the following summary and conclusions regarding the Property.

Subsurface Profile

The subsurface profile may be generalized as discontinuous areas of fill underlain by primarily granular soils and then shale bedrock.

The static groundwater levels measured in the monitoring wells ranged from 6.5 feet bgs at MW-02 to 13.01 feet bgs at MW-03, and the general direction of groundwater flow is to the northwest.

Exploratory Excavation

Based on results of the excavation activities, an approximately 800 to 1,000-gallon steel UST is present on the southwestern portion of the Property. This tank location correlates with the subsurface anomaly identified in the GPR survey conducted in July 2019. It does not appear that the UST was abandoned in place.

Soil Testing

The July 2019 investigation identified TCE concentrations in soil at SB-02 (10 to 12 feet; 111 mg/kg) exceeding the Ohio EPA VAP GDCS for Commercial/Industrial Land Use Category (51 mg/kg) and the Construction and Excavation Activities Category (17 mg/kg).

The results of supplemental soil analytical testing indicate that TCE impacted soils in the southern portion of the Property appear to have been delineated. The only TCE concentration exceeding a cited standard is present at SB-02 (10-12 feet). However, the VAP point of compliance (POC) for the commercial/industrial worker is two (2) feet and the POC for construction/excavation activities is 10 feet. The boring log for SB-02 indicates this sample interval (10-12 feet) is below the depth to groundwater encounter and PID readings above this interval do not suggest an elevated volatile impact. Therefore, this sample interval may be representative of groundwater impact. Based on this and the POCs discussed above, the concentration of TCE present at this depth does not appear to impact the use of the Property. Based on supplemental soil testing, the location of SB-02 likely represents the potential source area on-Property.

Groundwater Testing

Analytical results show no concentrations of COCs in groundwater exceeding the VISL or the Ohio EPA Accelerated Response Action Levels for a commercial scenario. No further assessment of groundwater for on-Property receptors appears warranted at this time.

Sub-Slab Vapor and Soil Gas Testing

Results of analysis of sub-slab vapor beneath the building on the Property (SV-05) showed no concentrations of VOCs above applicable standards for commercial use. No additional assessment of sub-slab vapor appears warranted at this time.

The initial results of soil gas testing in the southern portion of the Property indicates that an elevated concentration of TCE was present in soil gas at SV-02. Supplemental analytical testing downgradient of this location at SV-04 indicates that TCE is not present in soil gas at a concentration exceeding the cited commercial standards.

Soil gas analytical results from the southwestern portion of the Property (SV-03), at the location of the existing UST, indicate that TCE is present in the soil gas at a concentration exceeding the cited commercial standards. The presence of TCE in soil gas on this portion of the Property could represent a risk to adjacent potential off-Property commercial or residential receptors.

Recommendations

Partners recommends that a UST closure be completed in accordance with the BUSTR Corrective Action process described in OAC 1301:7-9-13.

Copyright © 2019, Partners

Partners understands that the northern portion of the Property is to be renovated and repurposed. Activities will not include removing the existing building and the future use will be as a storage facility. If excavations are planned at the Property, specifically on the southern portion of the Property, Partners recommends that a Soil Management Plan be developed and implemented to address impacted soils.

Soil gas, specifically on the southern portion of the Property, has been impacted with TCE at concentrations exceeding cited commercial standards. It does not appear that the presence of TCE in the soil gas on the southern portion of the Property has negatively impacted the existing commercial building on the northern portion of the Property. If the southern portion of the Property is to be developed with any kind of an occupiable structure, Partners recommends, at a minimum, that an engineering control such as a sub-slab depressurization system (SSDS) be installed during construction of any such building. Depending on the future plans for this portion of the Property, the Client may wish to further assess/confirm/delineate soil gas impacts.

The results of groundwater and soil gas analytical testing suggest that TCE is present in the groundwater and soil gas at concentrations that could negatively affect adjacent off-Property commercial and/or residential receptors. The existing building downgradient of and adjacent to the southern portion of the Property is currently a vacant commercial building; therefore, no immediate risk to residential receptors is present.

9.0 CLOSING

Thank you for the opportunity to serve your needs. Please call us at (800) 763-1363 if you have any questions or if we can be of any further assistance.

Sincerely,

Partners

Notes

1. FT - Feet below grade
2. mg/kg = Milligrams per kilogram - parts per million (ppm)
3. Ohio VAP GDCS Commercial/Industrial Land Use.
4. Ohio VAP GDCS Construction/Excavation Activities.
5. NE: no GDCS has been developed by the Ohio EPA.
6. Supplemental standards from the Ohio VAP CIDARS.

J: The identification of the analyte is acceptable; the reported value is an estimate.

Bolded numbers indicate a concentration above laboratory detection limits.

Bold and shaded numbers indicate a detected concentration above a comparison standard.

Notes

1. mg/L = milligrams per liter

2. USEPA VISL Target Groundwater Concentration for Commercial Use

3. Ohio EPA Response Action Levels in Groundwater

NE: No standard established by Ohio EPA; NSV: Not sufficiently volatile; NIT: No inhalation toxicity

J: The identification of the analyte is acceptable; the reported value is an estimate.

Bold numbers = concentration above detection limits.

Bold and shaded = concentration above a comparison standard.
